A Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke, 2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies

Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis *Efficient Computation of Geometric Manufacturability Metrics for Injection Molding* Rahul Vinay Khardekar,2008 **Stream Computing on Graphics Hardware** Ian Buck,2005 Design and Implementation of a Vulkan Engine Fynn Flügge,2019-01-18 Master s Thesis from the year 2018 in the subject Engineering Computer Engineering grade 1 3 Hamburg University of Technology language English abstract The Vulkan API released in February 2016 is the Khronos Group s answer to Microsoft s Direct3D 12 API published in 2015 Due to the revolutionary capabilities provided by the new API s to the programmer the releases were accompanied by an enormous hype Vulkan and Direct3D 12 provides the programmer unprecedented control and empowerment over the GPU and its memory which might introduce a new era in GPU computing This elaboration deals with the design and implementation of a graphic engine along with state of the art rendering features using the Vulkan API The Vulkan engine is built upon the OpenGL engine Oreon Engine developed in a previous work and used in the research elaboration Realtime GPGPU FFT Ocean Water Simulation Further an extensive study concering the capabilities of the new Vulkan API and its performance advantage compared to OpenGL is demonstrated Information, Communication and Engineering Teen Hang Meen,2013-02-27 Selected peer reviewed papers from the 2012 International Conference on Information Communication and Engineering ICICE 2012 December 15 20 2012 Fuzhou Taiwan **Advances in Informatics** ,2005 *Popular Science* ,2002 *Bedford's Tech Edge* ,2003 Real Time Graphics ,2001
