Pan, 2012-12-06 Our Subjects and Objectives This book is about algebraic and symbolic computation and numerical computing with matrices and polynomials It greatly extends the study of these topics presented in the celebrated books of the seventies AHU and BM these topics have been under represented in CLR which is a highly successful extension and updating of AHU otherwise Compared to AHU and BM our volume adds extensive material on parallel computations with general matrices and polynomials on the bit complexity of arithmetic computations including some recent techniques of data compression and the study of numerical approximation properties of polynomial and matrix algorithms and on computations with Toeplitz matrices and other dense structured matrices The latter subject should attract people working in numerous areas of application in particular coding signal processing control algebraic computing and partial differential equations The authors teaching experience at the Graduate Center of the City University of New York and at the University of Pisa suggests that the book may serve as a text for advanced graduate students in mathematics and computer science who have some knowledge of algorithm design and wish to enter the exciting area of algebraic and numerical computing The potential readership may also include algorithm and software designers and researchers specializing in the design and analysis of algorithms computational complexity algebraic and symbolic computing and numerical computation **New**

Parallel Algorithms for Direct Solution of Linear Equations C. Siva Ram Murthy, K. N. Balasubramanya Murthy, Srinivas Aluru, 2000-10-30 Rather than parallelizing sequential algorithms the authors develop new back substitution free parallel algorithms using a bidirectional elimination technique for the solution of both dense and sparse linear equations They provide full coverage of bidirectional parallel algorithms based on Gaussian elimination LU factorization Householder reductions and modified Gram Schmidt orthogonalization Givens rotations sparse Cholesky factorization and sparse factorization clearly demonstrating how the bidirectional approach allows for improved speedup numerical stability and

efficient implementation on multiprocessor systems Plus the book offers a useful survey of the vast literature on direct methods introductory material on solving systems of linear equations and exercises It is an invaluable resource for computer scientists researchers in parallel linear algebra and anyone with an interest in parallel programming BOOK JACKET
