NOTE FROM THE AUTHOR I have a confession to make I call myself a designer but I never went to design school only worked in a web agency for a couple months and learned what I know by reading blogs and following along tutorials I think this is one of the reasons why I love writing and blogging it gives me a chance to give back and in turn help aspiring designers just like I was helped myself And I also blog because I want to show that although good design can often feel magical the process itself isn t it s just about mastering the basics and a lot of hard work If I can do it I believe you probably

can as well So what you have here is a selection of the most interesting articles I've written over the past couple years All I hope is that they will help make a long plane ride a little bit shorter and just maybe give you some new perspectives on design

EXCERPT FROM THE BOOK User Experience is a term you hear thrown around a whole lot lately For some people it means the way a site looks and feels for others it's all about a site's architecture but for most of them it's just an empty buzzword that doesn't mean anything at all User experience is all that and much more It literally is what users think and feel while using your product UX Is Everywhere If your site has a painless sign up process that's part of the user experience If your site uses gorgeous photos that's part of the user experience If your site is unbearably slow that's UX too And if your site is perfect but there's a bug in your code and you end up charging people twice as much for your product well guess what that's also part of their very bad user experience So user experience design can include web design photography speed optimization coding to say nothing of copywriting branding security interaction design or information architecture We're All User Experience Designers It logically follows that someone who calls himself a user experience designers should be involved in every one of those aspects But instead actual user experience designers usually come in during the early stages of a project and use wireframes and prototypes to plan out design architecture and interactions Don't get me wrong I'm not saying it's not a real job But I feel like it should be called something else like maybe Prototype Designer or User Experience Consultant if the person comes in at a later stage to analyze an existing site In my mind the title of User Experience Designer does not belong to a single person Instead it should be embraced by everybody contributing to the project whether they are a designer coder photographer writer or systems administrator Because after all their work is what ultimately defines the user's experience Can You Add More UX to It Why is that important at all Isn't all this just a question of semantics Well yes it is But bad semantics lead to bad communication and that in turn leads to bad results It's not uncommon to hear clients asking if you do UX or asking a designer if they focus on UX UX soon becomes an empty buzzword that can mean whatever the client wants it to mean User Experience Professionals have done a great job of promoting UX as a concept But I feel it's now time that designers reclaim that term and make it clear that UX is not a mysterious new idea but instead part of what every designer does every day Buy the book to read more
