Outlander and Lord John as Crime Fiction Erin E. MacDonald, 2025-01-24 Fans across the globe are familiar with Diana Gabaldon's bestselling *Outlander* series and the Starz television series that adapts it. Combining science fiction, time travel, and historical romance, the *Outlander* universe has captivated millions with its detail and complexity. However, few readers or viewers realize how large an influence the mystery genre has had on Gabaldon's plots, characters, and writing style. Her *Lord John* series of novels and short stories is obviously rooted in the crime fiction tradition, although it doesn't play by all of the traditional generic rules. Even the larger *Outlander* novels though contain at least one mystery in every book. This inclusion of the murder, mystery, and other crimes is no accident; the author has stated her love of the genre and her deliberate use of it many times. This collection of scholarly essays delves into the many connections between the world of *Outlander* and the world of crime fiction. It analyzes in depth for the first time the ways that crime and punishment, vigilante justice, and murder and mystery are represented in both the *Outlander* and *Lord John* series. Moving beyond the stereotypical romantic focus, this book demonstrates the variety and complexity of Gabaldon's universe. **Routledge Handbook of Science, Technology, and Society** Daniel Lee Kleinman, Kelly Moore, 2014-06-05 Over the last decade or so, the field of science and technology studies (STS) has become an intellectually dynamic interdisciplinary arena. Concepts, methods, and theoretical perspectives are being drawn both from long-established and relatively young disciplines. From its origins in philosophical and political debates about the creation and use of scientific knowledge, STS has become a wide and deep space for the consideration of the place of science and technology in the world, past and present. The *Routledge Handbook of Science, Technology, and Society* seeks to capture the dynamism and breadth of the field by presenting work that pushes the reader to think about science and technology and their intersections with social life in new ways. The interdisciplinary contributions by international experts in this handbook are organized around six topic areas: embodiment, consuming technoscience, digitization, environments, science as work, rules and standards. This volume highlights a range of theoretical and empirical approaches to some of the persistent and new questions in the field. It will be useful for students and scholars throughout the social sciences and humanities, including in science and technology studies, history, geography, critical race studies, sociology, communications, women's and gender studies, anthropology, and political science.
