Urban Flood Management Andras Szollosi-Nagy,Chris Zevenbergen,2018-02-06 Over the last decades the world has witnessed a growing number of floods in urban areas Climate change and rapid urbanization will exacerbate this trend Flooding incidents in urbanized catchments and low lying areas such as polders can lead to great public concern and anxiety and their economical impact is severe Apart from well known flood prevention strategies new approaches to the accommodation of floods are needed to create robust and sustainable solutions that enable us to cope with the ever increasing urban pressure on flood prone areas and the uncertainties created by climate change Urban Flood Management comprises a multidisciplinary survey of recent developments in this field Subjects like spatial and urban planning flood insurance flood resilience flood proofing techniques risk perception and preparedness and flood forecasting are treated by authorities from Brazil India the USA and Europe Urban Flood Management will provide anyone active in the fields of water risk and urban management with the latest information and insights that were obtained with a global and multidisciplinary approach

Flood Risk Management and Response D. Proverbs,C.A. Brebbia,2016-12-28 Flooding is a global phenomenon that claims countless lives worldwide each year Beginning in 2008 at the Institution of Civil Engineers in London this book contains papers presented at the 5th conference in the successful series on Flood Recovery Innovation and Response When flooding occurs in populated areas it can cause substantial damage to property as well as threatening human life Apart from the physical damage to buildings contents and loss of life which are the most obvious impacts of floods upon households indirect losses are often overlooked These indirect and intangible impacts are generally associated with disruption to normal life as well as longer term health issues including stress related illness In many parts of the developing world flooding can represent a major barrier to the alleviation of poverty as vulnerable communities are often exposed to sudden and life threatening events How we respond and adapt to the challenges of flooding is key to developing our long term resilience This book provides a platform for the work of researchers academics and practitioners actively involved in improving our understanding of flood events and our approaches to response recovery and resilience A wide range of technical and management topics related to flooding and its impact are included Flood management Flood warning Flood risk adaptation Flood protection products and processes Flood risk modelling Flood forecasting Flood vulnerability Urban flood modelling Flood risk assessment and recovery Climate change impact Socio and economic impact Flood case studies Flood damage assessment Storm water control

Threats to Global Water Security J. Anthony Jones,Trahel Vardanian,Christina Hakopian,2009-06-17 The UN designated the decade 2005 2015 as the International Decade for Action Water for Life The move was initiated at the third World Water Forum in Kyoto 2003 and it could prove the most significant and effective outcome of the triennial series of World Water For a yet Its major aims are 1 to promote efforts to fulfil recent international commitments especially in the Millennium Goals 2 to advance towards a truly integrated international approach to sustainable

water management and 3 to put special emphasis on the role of women in these efforts Even so it faces tremendous and as I write increasing obstacles The intense season of hurricanes and tropical storms in 2008 illustrated yet again not only the power of nature but also the vulnerability of the poorer nations like Haiti and Jamaica New Orleans and Texas fared better not because of the efforts of the International Decade for Natural Disasters 1990 2000 to increase preparedness but more because the USA had learnt from its own experiences in Hurricane Katrina The biggest obstacle of all is the burgeoning world population It took off last century but it is predicted to reach unimaginable heights this century at least 10 billion by 2050 maybe 20 billion by 2100 Governments are powerless to halt it even the Chinese Achieving water security globally against this backdrop will be a Herculean task
