solutions can't touch. Consider this: it's possible that your organization could accumulate if it hasn't already billions of rows of data with hundreds of millions of data combinations in multiple data stores and abundant formats. High performance analytics is necessary to process that much data in order to figure out what's important and what isn't. Using big data analytics you can extract only the relevant information from terabytes, petabytes, and exabytes and analyze it to transform your business decisions for the future. Becoming proactive with big data analytics isn't a one-time endeavor; it is more of a culture change, a new way of gaining ground by freeing your analysts and decision makers to meet the future with sound knowledge and insight.

SAS support for big data implementations including Hadoop through SAS and Hadoop is possible work in all steps of Analytical Process: Identify, formulate, Problem, Data Preparation, Data Exploration, Transform and select, Build Model, Validate model, Deploy Model, and Evaluate, Monitor Results. This book presents the work possibilities that SAS offers in the modern sectors of big data: Business Intelligence and Analytics. The most important tools of SAS are presented for processing and analyzing large volumes of data in an orderly manner. In turn, these tools allow also extract the knowledge contained in the data.

Big Data With SAS Visual Analytics Cesar Lopez Perez, 2014-01. Is known as Big Data, the treatment and analysis of large amounts of data whose size makes it impossible to treat them with databases and conventional analytical tools. The proliferation of web pages, applications, image and video, social networks, mobile devices, apps, sensors, and other modern devices capable of generating huge amounts of data have necessitated the development of Big Data Tools for analysis. We talk about an absolutely relevant environment for many aspects from the analysis of phenomena such as climate or seismographic data to environments such as health safety or of course the business field. As for Big Data Tools, there is a growing development. Oracle uses Exadata for these purposes. SAS uses Visual Analytics and open source Hadoop a framework that is highly popular in this field that enables applications to work with huge repositories of data and thousands of nodes inspired by Google tools like MapReduce and Google File System or NoSQL non relational database systems needed to hold and process the enormous complexity of all data generated. Highlights and in many cases do not follow the logic of the ACID atomicity, consistency, isolation, durability guarantees characteristic of conventional databases. This book delves into the treatment of the techniques of BIG DATA with SAS VISUAL ANALYTICS application.

Big Data. James Braselton, 2014-08-14. People and organizations have attempted to tackle the problem to analyze massive volumes of data from many different angles. SAS uses multicore technologies to deliver increased processing capabilities through high performance in database and in memory analytics resulting in greater insights more quickly from big data and streaming data. Important foundational updates allow you to deploy SAS in the manner that best suits your needs. The angle that is currently leading the pack in terms of popularity for massive data analysis is an open source project called Hadoop. Hadoop is also shipped as part of SAS tools. SAS incorporated Hadoop into their applications. SAS Base, SAS Data Integration, SAS Enterprise Guide, SAS Enterprise Miner. Some SAS applications work in memory on Hadoop. In memory Statistics, SAS Visual
