video processing to robot control learning Because they provide a blueprint for solving many tasks in artificial intelligence they have been called Foundation Models After a brief introduction to basic NLP models the main pre trained language models BERT GPT and sequence to sequence transformer are described as well as the concepts of self attention and context sensitive embedding Then different approaches to improving these models are discussed such as expanding the pre training criteria increasing the length of input texts or including extra knowledge An overview of the best performing models for about twenty application areas is then presented e g question answering translation story generation dialog systems generating images from text etc For each application area the strengths and weaknesses of current models are discussed and an outlook on further developments is given In addition links are provided to freely available program code A concluding chapter summarizes the economic opportunities mitigation of risks and potential developments of AI
