

## PT Activity: Layer 2 VLAN Security

### Instructor Version

### Topology Diagram

### Objectives

- Connect a new redundant link between SW-1 and SW-2.
- Enable trunking and configure security on the new trunk link between SW-1 and SW-2.
- Create a new management VLAN (VLAN 20) and attach a management PC to that VLAN.
- Implement an ACL to prevent outside users from accessing the management VLAN.

### Introduction

A company's network is currently set up using two separate VLANs: VLAN 5 and VLAN 10. In addition, all trunk ports are configured with native VLAN 15. A network administrator wants to add a redundant link between switch SW-1 and SW-2. The link must have trunking enabled and all security requirements should be in place.

In addition, the network administrator wants to connect a management PC to switch SW-A. The administrator would like to allow the management PC to be able to connect to all switches and the router, but does not want any other devices to be able to connect to the management PC or the switches. The administrator would like to create a new VLAN 20 for management purposes.
