Mesenchymal Stem Cells and Derived Extracellular Vesicles as Next-Generation Biological Drugs for Tissue Regeneration Silvia Barbon, Andrea Porzionato, Antara Banerjee, 2026-01-30 In the field of Regenerative Medicine the preclinical and clinical research on multipotent adult stem cells and in particular mesenchymal stem cells MSCs has prompted the identification of new therapeutic approaches for the treatment of structural tissue organ dysfunctions and congenital or acquired diseases Over the last decades compelling evidence has demonstrated that the powerful therapeutic effects of MSCs are due to paracrine like secretion of cytokines growth factors and chemokines and extracellular vesicles EVs EVs are the paracrine effectors of MSCs that carry a set of molecules capable of influencing the metabolism and even the phenotype of target cells tissues The application of MSCs as biological drugs in cell therapy is based on regulating the inflammatory response and participating in tissue repair and regeneration The therapeutic effect of MSCs is largely ascribed to their immunomodulatory function regulated by the inflammatory environment Among the most important regenerative properties and immune regulation capabilities of MSCs is the secretion of EVs that retain the therapeutic action of the parent cells The use of EVs may help to overcome the safety concerns associated with live cell therapy and become the focus of future clinical approaches in Regenerative Medicine Several researchers have explored the role of MSCs and MSC EVs in various tissue damaging diseases However their key role in the development of immune regulation and stimulation of tissue regeneration still deserves to be clarified prior to their clinical application This Research Topic invites different kinds of contributions e.g. original research articles short communications review articles clinical studies that focus on the preclinical and translational investigation of MSCs and MSC EVs about different therapeutic aspects related to organ tissue regeneration Topics include but are not restricted to the following MSC responsiveness to humoral and mechanical stimuli to promote functional tissue regeneration Interactions between MSCs and natural synthetic biomaterials for the development of advanced tissue substitutes Standardization of MSC EV isolation and enrichment techniques and characterization of their biological structure transcriptome and secretome In vitro and in vivo investigation of the paracrine activity of MSCs and MSC EVs including their immunomodulatory function MSC and MSC EV based therapies in animal models of organ failure and disease

Rural STEM Education Research: Bridging between Uniqueness and Universality Guan Saw, Angela Starrett, Audrey Meador, Hobart Harmon, 2026-01-23 The opposition between uniqueness and universality in rural science technology engineering mathematics and medicine

STEMM education research is an enduring feature of the field. Theories and methods developed to be universally applicable are constantly adopted or reimaged in studying and understanding certain unique STEMM education phenomena or issues within and across rural contexts partly due to the vastness and variety that exists in what is labeled as rural and or STEMM education. Research ideas and findings focused on a unique rural population or setting often can have universal implications for other rural and non rural populations or settings though not explicitly articulated in many publications. Striving to be both unique and universal is a fundamental challenge yet has the potential to advance knowledge and practice in the field of rural STEMM education. The overall goal of this Research Topic is to introduce and explore the ideas of rural focused and rural reimaged approaches in potentially bridging the gaps between uniqueness and universality in STEMM education research. Rural focused theories and constructs e.g. place based education, rural identity are centered around populations and issues in rural settings whereas rural reimaged theories and constructs e.g. urban rural spatial inequality, social capital, expectancy, value beliefs are traditional theories and constructs that are reconceptualized to include rural perspectives in the studies. This Research Topic seeks articles that examine both the uniqueness and universality of rural STEMM education and educational research utilizing rural focused and or rural reimaged lens or approaches. We particularly welcome articles that address unique assets, challenges, needs, opportunities and or lessons learned of rural STEMM education while being situated in a broader research discipline as well as articles that explore the commonalities and connections across study cases, policies, programs, practices or contexts of rural STEMM education. This Research Topic invites theoretical, methodological and empirical contributions addressing but not limiting to the following key topics: Rural focused topics: Defining rurality in STEMM education, Defining STEMM in rural areas, Place based STEMM teaching learning etc. Rural STEMM identity, belonging etc. STEMM education in rural serving postsecondary institutions, STEMM education for local workforce development. Rural reimaged topics: Urban rural spatial inequality in rural STEMM education, Community cultural wealth in rural STEMM education, STEMM funds of knowledge of rural learners, Underrepresentation of rural students in STEMM education, Intersectionality in rural STEMM education, Critical policy analysis in rural STEMM education, Communities of practice in rural STEMM education, Research practice partnerships for rural STEMM education. Articles need to define rurality for interpretation by international readers and describe the uniqueness and universality of the research topics, theories, methods, findings and or implications in the context of rural STEMM education.
