Lewars, 2008-12-05 The aim of this book is to survey a number of chemical compounds that some chemists theoretical and experimental find fascinating Some of these compounds like planar carbon species or oxirene offer no obvious practical applications nitrogen oligomers and polymers in contrast have been touted as possible high energy density materials What unites this otherwise eclectic collection is that these substances are unknown and offer a challenge to theory and to synthesis That such a challenge exists is in some cases almost obvious to most chemists The instability of nitrogen polymers for example might be taken nearly as an axiom to be quantified but not refuted by computations and to be subjected to an almost superfluous but rather challenging validation by synthesis On the other hand oxirene the unsaturated relative of the prosaic oxirane presents no immediately obvious oddity yet this molecule has defied all attempts at synthesis and remains a theoretical conundrum in that it is not certain if it can even exist It is hoped that this collection of idiosyncratic molecules will appeal to chemists who find the study of chemical oddities interesting and on occasion even rewarding A great romp through imagined molecules a challenge to the talents of synthetic chemists Errol Lewars leads us expertly through a wonderland of the chemical imagination fascinating molecular structures that do not yet exist Prof Roald Hoffmann Nobel Laureate Chem 1981 Cornell University New York USA This book is an educational and enjoyable read devoted to species on the fringes of chemical calculation and conceptual plausibility Prof Joel Liebman University of Maryland Baltimore County USA

Simmie,Edward Blurock,2013-09-06 This overview compiles the on going research in Europe to enlarge and deepen the understanding of the reaction mechanisms and pathways associated with the combustion of an increased range of fuels Focus is given to the formation of a large number of hazardous minor pollutants and the inability of current combustion models to predict the formation of minor products such as alkenes dienes aromatics aldehydes and soot nano particles which have a deleterious impact on both the environment and on human health Cleaner Combustion describes at a fundamental level the reactive chemistry of minor pollutants within extensively validated detailed mechanisms for traditional fuels but also innovative surrogates describing the complex chemistry of new environmentally important bio fuels Divided into five sections a broad yet detailed coverage of related research is provided Beginning with the development of detailed kinetic mechanisms chapters go on to explore techniques to obtain reliable experimental data soot and polycyclic aromatic hydrocarbons mechanism reduction and uncertainty analysis and elementary reactions This comprehensive coverage of current research provides a solid foundation for researchers managers policy makers and industry operators working in or developing this innovative and globally relevant field

*Photoinduced Phenomena in Nucleic Acids I* Mario Barbatti,Antonio Carlos Borin,Susanne Ullrich,2014-12-26 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field Review articles for the individual volumes are invited by the volume editors Readership research chemists at universities or in industry graduate students **Concise Physical Chemistry** Donald W.
