heralded and publicly embraced by foreign leaders of many countries that define themselves by their own historic revolutions. The contributors to this volume examine the legitimacy of these comparisons by exploring whether or not all modern revolutions follow a pattern or script. Traditionally historians have studied revolutions as distinct and separate events. Drawing on close familiarity with many different cultures, languages and historical transitions, this anthology presents the first cohesive historical approach to the comparative study of revolutions. This volume argues that the American and French Revolutions provided the genesis of the revolutionary script that was rewritten by Marx, which was revised by Lenin and the Bolshevik Revolution, which was revised again by Mao and the Chinese Communist Revolution. Later revolutions in Cuba and Iran improvised further. This script is once again on display in the capitals of the Middle East and North Africa and it will serve as the model for future revolutionary movements.

The Angier Idea Angier Chemical Company, 1922 **Take Command of Your Writing** Jill Meryl Levy, 1998 *Language Diversity and Cognitive Representations* Catherine Fuchs, Stéphane Robert, 1999

Significant new developments in brain activity research have revived the debate on the universality of language and its neural basis. Within this debate, the question of language diversity and its implications for cognition remains central and controversial. It is here investigated in an original multimodal approach covering various aspects of cross-linguistic variation: differences between spoken, signed and drum languages; between normal speech and pathological speech; and also between language and music as revealed in electric brain activity associated with language processing. The various contributions—linguistic, anthropological, psychological and neurophysical—on the nature and status of variation and invariants in language provides evidence for complex interactions between language-specific processes and general cognitive faculties. This overview of some recent trends in cognitive linguistics opens up a promising new research area in the humanities as well as in the cognitive sciences.
