Operations Management R. Dan Reid, Nada R. Sanders, 2023-05-03 Curate an introductory operations management approach that makes this course accessible and engaging for all business majors Beyond providing a solid foundation Operations Management 8th Edition covers emerging topics like Artificial Intelligence Robotics Data Analytics and Sustainability and offers a streamlined and balanced coverage of qualitative and quantitative materials that provide both an applied and practical approach To improve the learning experience for all students this edition leverages customizable tactile teaching and learning methods Artificial Intelligence Commission on California State Government Organization and Economy, 2018 **Machine Learning. A Guideline for its Usability in Production Systems** Alexander Volz, 2019-06-28 Bachelor Thesis from the year 2017 in the subject Engineering Mechanical Engineering grade 1 3 RWTH Aachen University language English abstract This thesis provides an especially designed overview for the needs of decision makers in the production industry on the field of machine learning By concerning economic and technological factors as well as the individual challenges for companies the goal of this thesis is to serve as a guideline for the usage of machine learning in production systems After the revolutionary change caused by the introduction of the steam engine the production line electronics and IT into the manufacturing industry a new disrupting change is expected Nowadays the rapidly increasing digitalization of the economy leads to the fourth industrial revolution This global phenomenon is called Industrie 4 0 GER or Smart Factory US and it combines production technology with information and communication technology Especially data based optimization in production is one of the predominant goals of Industrie 4 0 For the automatized analysis of large amounts of data machine learning is an effective instrument and therefore a central element in Industrie 4 0 Recent progress in machine learning has been driven by the development of new learning algorithms and by the increasing availability of data and low cost computation power For many applications from computer vision to adaptive robots it was very difficult to devise deterministic rules However for these applications it is possible to collect data and now the idea is to use algorithms that learn from data instead of being manually programmed Thus machine learning has the potential to transform data into valuable knowledge for decision making while making improvements possible to the production system with approaches such as predictive maintenance The transfer of machine learning from the lab to the real world leads to an increased interest in learning techniques demanding further effort in explaining on how machine learning works and what it can be used for in other disciplines However the entry barrier to the diverse field of machine learning is high With many different algorithms

theories and methods it is hard to oversee and therefore its influence remains limited In addition a recent study states that about 47% of jobs in the US are at high risk of computerization within the next decades Therefore employees feel insecure and demand answers on what effect machine learning will have on their future role in the factory *Own the A.I.*
