Computer Vision--ECCV '92 Giulio Sandini, 1992-04-29 This volume collects the papers accepted for presentation at the Second European Conference on Computer Vision held in Santa Margherita Ligure Italy May 19 22 1992 Sixteen long papers 41 short papers and 48 posters were selected from 308 submissions The contributions are structured into 14 sections reflecting the major research topics in computer vision currently investigated worldwide The sections are entitled features color calibration and matching depth stereo motion tracking active vision binocular heads curved surfaces and objects reconstruction and shape recognition and applications Advances in Robot Design and Intelligent Control Theodor Borangiu, 2015-08-07 This volume includes the Proceedings of the 24th International Conference on Robotics in Alpe Adria Danube Region RAAD 2015 which was held in Bucharest Romania on May 27 29 2015 The Conference brought together academic and industry researchers in robotics from the 11 countries affiliated to the Alpe Adria Danube space Austria Croatia Czech Republic Germany Greece Hungary Italy Romania Serbia Slovakia and Slovenia and their worldwide partners According to its tradition RAAD 2015 covered all important areas of research development and innovation in robotics including new trends such as bio inspired and cognitive robots visual servoing of robot motion human robot interaction and personal robots for ambient assisted living The accepted papers have been grouped in nine sessions Robot integration in industrial applications Grasping analysis dexterous grippers and component design Advanced robot motion control Robot vision and sensory control Human robot interaction and collaboration Modelling and design of novel mechanisms and robotic structures Robots in medicine and rehabilitation Tracking systems and Unmanned Aerial Vehicles Autonomous task learning motion planning and scheduling Robotic Vision Peter Corke, 2021-10-15 This textbook offers a tutorial introduction to robotics and Computer Vision which is light and easy to absorb The practice of robotic vision involves the application of computational algorithms to data Over the fairly recent history of the fields of robotics and computer vision a very large body of algorithms has been developed However this body of knowledge is something of a barrier for anybody entering the field or even looking to see if they want to enter the field What is the right algorithm for a particular problem and importantly How can I try it out without spending days coding and debugging it from the original research papers The author has maintained two open source MATLAB Toolboxes for more than 10 years one for robotics and one for vision The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems not trivial examples For the student the book makes the algorithms accessible the Toolbox code can be read to gain understanding and the examples illustrate how it can be used instant gratification in just a couple of lines of MATLAB code The code can also be the starting point for new work for researchers or students by writing programs based on Toolbox functions or modifying the Toolbox code itself The purpose of this book is to expand on the tutorial material provided with the toolboxes add many more examples and to weave this into a narrative that covers robotics and computer vision separately and together The author shows how complex problems can

be decomposed and solved using just a few simple lines of code and hopefully to inspire up and coming researchers The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision It is written in a light but informative style it is easy to read and absorb and includes a lot of Matlab examples and figures The book is a real walk through the fundamentals light and color camera modelling image processing feature extraction and multi view geometry and bring it all together in a visual servo system An authoritative book reaching across fields thoughtfully conceived and brilliantly accomplished Oussama Khatib Stanford *Local Image Descriptor: Modern Approaches* Bin Fan,Zhenhua Wang,Fuchao Wu,2016-01-04 This book covers a wide range of local image descriptors from the classical ones to the state of the art as well as the burgeoning research topics on this area The goal of this effort is to let readers know what are the most popular and useful methods in the current what are the advantages and the disadvantages of these methods which kind of methods is best suitable for their problems or applications and what is the future of this area What is more hands on exemplars supplied in this book will be of great interest to Computer Vision engineers and practitioners as well as those want to begin their research in this area Overall this book is suitable for graduates researchers and engineers in the related areas both as a learning text and as a reference book *Computer Vision and Graphics* Leonard Bolc,Ryszard Tadeusiewicz,Leszek J.
