Color Atlas of Congenital Heart Surgery S. Bert Litwin, 2007-09-24 The last three decades have witnessed enormous progress in the care of patients with congenital heart disease Treatment of congenital heart disease is highly dependent on technology and much of the progress we have witnessed is attributable to technological advances we take almost for granted today It would be difficult to overestimate the impact of these advances noteworthy examples include the development of 2 D Doppler echocardiography resulting in increased diagnostic accuracy improvements in preoperative management including the use of prostaglandins for maintaining ductal patency better intraoperative support such as the development of cardiopulmonary bypass circuits specifically designed for neonates and infants and improvements in postoperative care too numerous to delineate As the spectrum of congenital heart disease we can treat successfully has broadened and the results have improved

much of the focus has shifted properly to long term issues such as neurodevelopmental outcome and quality of life Despite the current focus on long term outcomes we must not forget that surgery is central to our treatment strategy The word technology is derived from the Greek word techne meaning craft and before any late out comes can be measured the craft of surgery must be performed with excellence Dr Litwin s career has spanned these last three decades and he has witnessed and participated in the evolution of congenital heart surgery The second edition of a Color Atlas of Congenital Heart Surgery is an outstanding contribution to the field by a master of the craft of congenital heart surgery *Color Atlas of Ophthalmic Surgery* Kenneth W.
