Theory and Applications of Satisfiability Testing Fahiem Bacchus, Toby Walsh, 2005-06-02 The 8th International Conference on Theory and Applications of Satisfiability Testing SAT2005 provided an international forum for the most recent research on the satisfiability problem SAT. SAT is the classic problem of determining whether or not a propositional formula has a satisfying truth assignment. It was the first problem shown by Cook to be NP complete. Despite its seemingly specialized nature, satisfiability testing has proved to be extremely useful in a wide range of different disciplines, both from a practical as well as from a theoretical point of view. For example, work on SAT continues to provide insight into various fundamental problems in computation, and SAT solving technology has advanced to the point where it has become the most effective way of solving a number of practical problems. The SAT series of conferences are multidisciplinary conferences intended to bring together researchers from various disciplines who are interested in SAT. Topics of interest include, but are not limited to, proof systems and proof complexity, search algorithms and heuristics, analysis of algorithms, theories beyond the propositional, hard instances, and random formulae, problem encodings, industrial applications, solvers, and other tools. This volume contains the papers accepted for presentation at SAT 2005. The conference attracted a record number of 73 submissions. Of these, 26 papers were accepted for presentation in the technical programme. In addition, 16 papers were accepted as shorter papers and were presented as posters during the technical programme. The accepted papers and poster papers cover the full range of topics listed in the call for papers.

Genetic Programming Theory and Practice XII Rick Riolo, William P. Worzel, Mark Kotanchek, 2015-06-04 These contributions, written by the foremost international researchers and practitioners of Genetic Programming (GP), explore the synergy between theoretical and empirical results on real world problems, producing a comprehensive view of the state of the art in GP. Topics in this volume include gene expression regulation, novel genetic models for glaucoma, inheritable epigenetics, combinatorics in genetic programming, sequential symbolic regression, system dynamics, sliding window symbolic regression, large feature problems, alignment in the error space, HUMIE winners, Boolean multiplexer function, and highly distributed genetic programming systems. Application areas include chemical process control, circuit design, financial data mining, and bioinformatics. Readers will discover large scale real world applications of GP to a variety of problem domains via in-depth presentations of the latest and most significant results.

Applied XML Solutions Benoît Marchal, 2000 *Artful Making* offers the first proven research-based framework for engineering ingenuity and innovation. This book is the result of a multi-year collaboration between Harvard Business School professor Robert Austin and leading theatre director and playwright Lee Devin. Together they demonstrate striking structural similarities between theatre artistry and production and today's business projects, and show how collaborative artists have mastered the art of delivering innovation on cue, on immovable deadlines, and budgets. These methods are neither mysterious nor flaky; they are rigorous, precise, and with this book's help, absolutely learnable and reproducible. They rely on cheap and rapid iteration rather than on intensive up-front planning, and with the help of today's

enabling technologies they can be applied in virtually any environment with knowledge based outputs Moreover they provide an overarching framework for leveraging the full benefits of today s leading techniques for promoting flexibility and innovation from agile development to real options

Open Information Management: Applications of Interconnectivity and Collaboration Niiranen, Samuli,Yli-Hietanen, Jari,Lugmayr, Artur,2009-05-31 Discusses the impact of emerging trends in information technology towards solutions capable of managing information within open principally unbounded operational environments
