Knowledge-based Systems for General Reference Work John V. Richardson,1995 By focusing on knowledge based systems technology the primary purpose and goal of this book is to improve the quality of reference service rendered in libraries Within reference service this book examines question answering a complex and difficult task For those interested in the theoretical aspects of reference work they have to look no further than the first chapter In addition the book features theoretical chapters on modelling the reference transaction a chapter on the logic of ready reference work and a chapter on the appropriate criteria to apply in selecting an expert system shell Several practical chapters focus on what KBS work has already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most appropriate shell for their domain The subtitle of the book is applications problems and progress in regard to expert systems in reference work Applications are covered most clearly in chapter 8 which reviews the more than extant prototypes Chapter 3 covers what is feasible chapter 4 models the reference transaction and chapter 7 covers interface issues so that future applications can be more successful Problems are covered throughout the book starting with chapter 1 which discusses the traditional emphasis on reference sources It argues that the field needs to shift toward procedural knowledge related to work in reference departments The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing the intellectual work of an expert and of course chapter 9 directly points out limitations in extant systems Encouraging words

occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work Similarly the chapter on modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts The final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near term factors which will influence the development of expert systems Key Features Historical background presenting the field s paradigmatic thinking Decision trees for basic formats of reference material Flowchart modelling the reference transaction Reviews of more than fifty extant KBS in general reference environments Evaluative criteria on more than forty expert system shells American Cinematographer ,1986 Free China Review ,1996 **Library Journal** Melvil Dewey,Richard Rogers Bowker,L.
