Advances and Challenges of Applying AI/GenAI in Design and Process Science Elisabetta Ronchieri, John Carbone, Patrick Then, Radmila Juric, 2025-10-22 This book presents the proceedings of the 25th Society for Design and Process Science Conference SDPS 2024 which took place in Bologna Italy on October 6-9 2024 The 2024 conference centers on generative artificial intelligence GenAI and its impact on academia and industry The papers focus on the generational challenges that GenAI presents which industry leaders agree constitutes a sea change in technology not seen since the Industrial Revolution The conference emphasizes that as the AI GenAI community creates vast new and novel opportunities at a rapid pace it consequently creates challenges with lack of understanding and immature designs processes research engineering while also exposing gaps in formal AI GenAI design and process education The authors also discuss for the sake of analysis the general fear of unknown AI GenAI technologies as well as system ambiguity and disguised complexities The authors aim to present solutions that help to mitigate risk in these in critical environments e.g. medical financial cyber defense etc To better serve developers and modern business leaders with guidance to innovate mitigate risk and capitalize on novel advancements in AI GenAI the Society for Design and Process Science SDPS brings together the advanced academic research community with industry to more qualitatively harness the power of formal AI GenAI design and process to accelerate science and business

The Paradigm Shift from a Linear Economy to a Smart Circular Economy Mansoor Alaali, Abdalmuttaleb M. A. Musleh Al-Sartawi, Arafat Salih Aydiner, 2025-07-28 The concept of the circular economy has attracted the attention of scholars researchers professionals and policymakers in recent years The notion is characterised as an economy that intends to keep products stocks work in progress and materials at their highest utility and value continually distinguishing between their technical and biological cycles It is devised as a continuous positive development cycle that reserves and improves natural resources optimizes outputs and minimizes supply chain related risks by overseeing limited stocks and renewable flows of the stocks Several legislations and policies are being developed to motivate and integrate SDGs and net zero related approaches in companies among which the circular economy CE is gaining momentum due to its documented impact on the elements of the SDGs and net zero Efficient management of resources and utility via artificial intelligence is vital towards a smart circular economy by minimising waste losses pollution and extraction of virgin resources

It is important to note that there is a difference between smart and traditional circular economies. This book focuses on the former and makes distinctions in terms of how technology systems and solutions can be effectively and efficiently implemented. This book, *The Paradigm Shift from a Linear Economy to a Smart Circular Economy: The Role of Artificial Intelligence Enabled Systems, Solutions, and Legislations*, discusses the transition from linear to smart circular economy by dissecting the role of artificial intelligence and other technologies such as big data, IoT, and blockchain in such transformations. The book further aims to provide a platform for researchers, professionals, and students to closely investigate, discuss, and examine the theories, philosophies, ontologies, and the role of governments, policymakers, and businesses in supporting the transition to a smart economy via national initiatives, fiscal policies, and corporate governance. The book highlights the need for collaborative efforts between various actors, including the private and public sectors, through cross-disciplinary approaches to attain, maintain, and sustain a smart circular economy.

Proceedings of the Vortex Workshop
Yiqian Wang, Chaoqun Liu, Yan Li, 2024-11-15

Written by the leading experts in the field, this book results from the Vortex Workshop 2023, which took place in San Diego, USA, on December 11-13. Vortex is ubiquitous in the universe, such as in tornadoes, hurricanes, airplane tip vortices, and even star vortices. Vortices are also building blocks, muscles, and sinews of turbulent flows. A vortex is intuitively recognized as a rotational swirling motion of fluids, but until recently had no rigidly mathematical definition. In 1858, Helmholtz first defined a vortex as composed of so-called vortex filaments, which are infinitesimal vorticity tubes. This is called the first generation of vortex definition and identification, or G1. Although G1 has been accepted by the fluid dynamics community and almost all textbooks for over a century, we can find many immediate counterexamples, for example, in the laminar boundary layer where the vorticity shear is very large near the wall but no rotation exists. To solve these contradictions, many vortex criteria methods have been developed during the past 4 decades. More popular methods are represented by the Q-criteria methods. These methods have achieved part of success in vortex identification, which are called the second generation of vortex identification, or G2. However, G2 has several critical drawbacks: first, they are all scalars, which have no rotation axis directions, but a vortex is a vector. It is hard or impossible to use a scalar to represent a vector. Second, like vorticity, these criteria methods are all contaminated by shear in different degrees. Third, they are all very sensitive to threshold selections. The recently developed Liutex is called the third generation of vortex definition and identification, or G3, which is a uniquely defined vector.

Successful Agile Product Development: Secrets to Building the Best Products (Expanded edition)
Dr. Roger Chou, 2025-11-10
