However, if you want to put together all of the pieces to tell a compelling story about how to run an IT department or a deployment of Macs, you need to compile information from a number of different sources. This book provides explanations of the technology required. What You'll Learn: Choose a directory services model that works for your organization and integrate it into your existing model. Choose an imaging model and begin imaging workstations with or without third-party products. Use the Mac App Store and Apple's Volume Purchasing Program to deploy apps. Leverage scripting techniques to reduce labor for the IT department. Provide network services: file sharing, mobile home folders, messaging, etc. to the Mac OS X clients. Who This Book Is For: System administrators and IT professionals who need to manage a large number of Mac OS X computers, be they Mac OS X based servers or workstations. The assumption is that readers are somewhat familiar with Mac OS X and/or IT in general, but not that they are familiar with the Apple system internals, server services, or deployment techniques.
