Google and the Mission to Map Meaning and Make Money Bart Milner, 2004 This book is the unfolding story of the new technology of Internet Search how Larry Page and Sergey Brin the founders of Google discovered a new way to index

the Internet's network of networks by developing Search methods so powerful that they effectively created a free public and universal library out of billions of random documents. It also tells how together with the help of a brilliant team built initially at Stanford University they then found a new way of making money through contextual advertising now worth a billion leaving potential competitors particularly Microsoft far behind. It shows how Google's founders have also succeeded in insisting that integrity rather than profit remains at the heart of an enterprise that they will continue to control despite the best efforts of Wall Street. The second half of this book also seeks to explain the central problems of machine intelligence: the difference between words and their meaning or syntax and semantics which had blocked this kind of IT development for half a century until Google's founders discovered that hypertext, the unique feature of the Internet that links documents, could be measured and mapped to sort millions of apparently similar pages for relevance and significance. Google's pursuit of a hugely ambitious and optimistic American dream that leaves them globally admired and respected, keeping their principles intact whilst also creating a fabulously wealthy company, is a winning blend of luck, jokes, mathematical inspiration, engineering perspiration, deep technical knowledge of the Internet, and they would have you believe thousands of highly trained pigeons. The book is 288 pages long including a comprehensive index and 600-item bibliography covering virtually all aspects of Internet Search. The print version of the book comes with a free online electronic version with hypertext links to related articles and books designed to make any aspect of the history of Internet search easy to find with a couple of mouse clicks. The book's author, Bart Milner, is a trained technology journalist and editor who started using the Web in 1984 with a 300 baud acoustic coupler and then became a developer partly to try and solve the question of why computer logic has been unable to deal with meaning and association. This background has given him an insight into the inspired but almost accidental way that Google's founders cracked the problem of finding a significant document from billions of unindexed and changing Web pages in a fraction of a second. Anyone interested in the future of the Internet and Information Technology should enjoy this fast and fluid story of a company which has become a flagship business of the 21st century by not conceding any of its integrity and principles to the huge pressures of commercial profit whilst providing some of the most elegant and powerful engineering solutions ever seen on the Net.

GeoComputation, Second Edition Robert J. Abraham, Linda M. See, 2014-06-23. A revision of Openshaw and Abraham's seminal work *GeoComputation*. Second Edition retains influences of its originators while also providing updated state-of-the-art information on changes in the computational environment. In keeping with the field's development, this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation. See *What's New in the Second Edition*. Coverage of ubiquitous computing, the GeoWeb, reproducible research, open access, and agent-based modelling. Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms. Ten chapters updated by the same or new authors and eight new chapters added to reflect state-of-the-art. Each chapter is a stand-alone entity that covers a particular topic. You can simply dip in and out or

read it from cover to cover The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted This is not just a matter of respect Openshaw s work is eloquent prophetic and his overall message remains largely unchanged In contrast to other books on this subject GeoComputation Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists This approach helps develop and expand a computational culture one that can exploit the ever increasing richness of modern geographical and geospatial datasets It also supplies an instructional guide to be kept within easy reach for regular access and when need arises
