Uber versus taxi. Generation Y's perception of taxi and Uber services in Lisbon Benyi Heider,Carla Sofia Simões,Ivana Cizmar,Marvin Burmester,2016-05-02 Seminar paper from the year 2016 in the subject Economics Case Scenarios grade 17 0 1 3 in Deutschland Cat lica Lisbon School of Business Economics language English abstract This report investigates the effects and influence of Uber s market entry in the greater Lisbon area More specifically the study evaluates the resulting impact on Generation Y s perception of traditional taxi services Based on the findings of the research the report suggests concrete managerial implications to the traditional taxi industry The overall research was designed to derive insights based on both qualitative and quantitative approaches The qualitative research was performed with two focus groups and created the foundation for the quantitative research which was executed using an extensive online questionnaire with 94 participants Both approaches targeted respondents classified as Generation Y Core findings include the most significant attributes to

evaluate traditional taxi services Most importantly the price the friendliness of the driver and security were highlighted Moreover the overall satisfaction of customers is further determined by attributes such as availability comfort and payment process It must be considered however that taxi services are rated significantly different among Uber users and non Uber users As the former have ranked taxi services significantly worse than non Uber users it can be concluded that the recent market entry of Uber influences and changes Generation Y s perception of traditional taxis The complementing finding that Uber services have been evaluated significantly more positive among the all respondents impressively emphasizes the thread for traditional taxis in the greater Lisbon area The emerging competitor Uber is perceived as superior even among the non Uber users Both the qualitative and quantitative analysis revealed that the traditional taxi industry currently faces major problems related to the lack of trust transparency and security of the services as well as the limited options of payment methods For the time being this leaves the services availability as the only competitive advantage of the traditional taxi industry In order to secure its competitiveness in any market scenario it can be concluded that the industry needs to adapt its core services with regards to multiple service features With a focus on Generation Y the taxi industry must introduce tools and mechanisms to enhance and control transparency foster the acceptance of credit cards as a payment method and ultimately drop prices to a perceived fair and competitive level

Assessing the Impact of Uber on the United States Taxi Service Gerald U. Baraza,2021 The goal of this study was to evaluate the impact that Uber has had on the taxi industry in the United States The taxi industry s history is an ancient one that dates back to when horse drawn carts were available for hire to transport people for short and long distances in Europe The impact of technological innovation in the twenty first century was chosen for study because of its huge and drastic effects metamorphing from computer oriented to mobile and myriad portable devices and then advancing to smaller but very efficient devices with increased and effective functions The study explored the effects of Uber s market entry and operations in the United States by analyzing previous dissertations a couple theses journal articles and newspaper and magazine articles The study utilized qualitative research methods to decode six themes from available data analyzing the public transportation industry since Uber s introduction in 2011 The search criteria relied on the ProQuest research database university online repositories journal publications and newspaper and magazine publications The review excluded dissertation studies based outside of the United States because the aim was to identify factors that directly relate to this country The critical analysis involved assessing 17 dissertations that analyzed the impact of Uber and other ride hailing service providers A deductive approach was used to draw the six themes from 17 dissertations Some studies were found to have more than one theme Through this literature review came a discernment that there was room for further study A qualitative study of existing research was undertaken and secondary data was retrieved from publicly available sources especially doctoral dissertations After the initial literature and dissertation reviews a grounded theory methodology was

settled on as the most appropriate for this study Then followed the iterative process for establishing the data set of quotations This included the thought process for developing the descriptive labels subcodes and themes that were outlined Finally the six themes of disruptive innovation sharing economy business model historical context labor and regulation were found to be consistent across the data set around which the core concept coalesced *The Tariff Review* ,1925

Urbanization and Development ,2016 The analysis of urban development of the past twenty years presented in this maiden edition of the World Cities Report shows with compelling evidence that there are new forms of collaboration and cooperation planning governance finance and learning that can sustain positive change The Report unequivocally demonstrates that the current urbanization model is unsustainable in many respects It conveys a clear message that the pattern of urbanization needs to change in order to better respond to the challenges of our time to address issues such as inequality climate change informality insecurity and the unsustainable forms of urban expansion

Machine Learning. A Guideline for its Usability in Production Systems Alexander Volz,2019-06-28 Bachelor Thesis from the year 2017 in the subject Engineering Mechanical Engineering grade 1 3 RWTH Aachen University language English abstract This thesis provides an especially designed overview for the needs of decision makers in the production industry on the field of machine learning By concerning economic and technological factors as well as the individual challenges for companies the goal of this thesis is to serve as a guideline for the usage of machine learning in production systems After the revolutionary change caused by the introduction of the steam engine the production line electronics and IT into the manufacturing industry a new disrupting change is expected Nowadays the rapidly increasing digitalization of the economy leads to the fourth industrial revolution This global phenomenon is called Industrie 4 0 GER or Smart Factory US and it combines production technology with information and communication technology Especially data based optimization in production is one of the predominant goals of Industrie 4 0 For the automatized analysis of large amounts of data machine learning is an effective instrument and therefore a central element in Industrie 4 0 Recent progress in machine learning has been driven by the development of new learning algorithms and by the increasing availability of data and low cost computation power For many applications from computer vision to adaptive robots it was very difficult to devise deterministic rules However for these applications it is possible to collect data and now the idea is to use algorithms that learn from data instead of being manually programmed Thus machine learning has the potential to transform data into valuable knowledge for decision making while making improvements possible to the production system with approaches such as predictive maintenance The transfer of machine learning from the lab to the real world leads to an increased interest in learning techniques demanding further effort in explaining on how machine learning works and what it can be used for in other disciplines However the entry barrier to the diverse field of machine learning is high With many different algorithms theories and methods it is hard to oversee and therefore its influence remains limited In addition a recent study states that about 47% of jobs in the US are at high risk of

computerization within the next decades Therefore employees feel insecure and demand answers on what effect machine learning will have on their future role in the factory
