

Universal Grammar is a linguistic theory developed by Noam Chomsky according to which all human languages are constructed on the same, abstract template, and that this explains why all normal speakers acquire their native language quickly and accurately.

In response to the **logical problem** of language acquisition, which challenges theorists to explain how all normal children are able to learn any first language in only a few years, Chomsky posited the existence of a Language Acquisition Device (LAD).

He suggested that the LAD was an innate, language-specific module which effectively pre-programmed children to learn language. The LAD operated by restricting the number and type of hypotheses learners entertain about the **grammar**, or rule-system of the language.

Chomsky developed the notion of Universal Grammar (UG) as a blueprint for the LAD. UG, or generative grammar, consists in an abstract description of the components and structure underlying all human languages.

Generative linguists seek to refine and test these abstract linguistic descriptions, while second language generativists research whether and how UG is available to learners of second languages.

A **Language Acquisition Device** (LAD) is a hypothetical tool in the brain proposed by linguist Noam **Chomsky** that allows human beings to learn a language. According to Chomsky, the LAD is an inherent aspect of the human brain that is preprogrammed with specific grammatical structures common to all languages. It's this device, Chomsky argued, that explains why children are able to learn a language so quickly and with little formal instruction.

In his **Nativist Theory**, Noam **Chomsky** argues that children are born with the innate ability to learn a language due to this hypothetical 'tool' in the child's brain. Let's look at Chomsky's LAD theory in more detail.

Butts,Jaakko Hintikka,1977 *The Western Classical Tradition in Linguistics* Keith Allan,2007 The Western Classical Tradition in Linguistics examines ancient medieval post renaissance and modern conceptions of linguistics i e the study of language and languages It identifies a classical tradition to which modern linguistics owes a very clear debt For example Aristotle takes language to be A a symbolic system that represents B the world of our experience as it is contained within the mind He believed C the world is external to human beings who are all capable of D perceiving the same things within it Finally E Aristotle was only interested in form as a corollary of function A E have given rise to different developments in linguistics A is a premise for all linguists but has been developed perhaps to its limits in post Fregean semantics From the last quarter of the 20th century B has been pursued by cognitive linguists C was taken up by the speculative grammarians of the late middle ages who looked to the structure of God s world as informing the structure of universal grammar The rationalists of the seventeenth and eighteenth centuries took up D revising the interpretation of their speculative precursors to seek universal grammar in the God given rational minds of the human beings perceiving the world around them Chomsky reinterprets the rationalist doctrine to seek universal grammar in the human mind while eschewing the relevance of human perception of anything other than linguistic input Functional linguistics has picked up on E So today s formal linguists cognitivists functionalists and Chomskyites may often be at odds with each other but all tread in Aristotle s footprints within the western classical tradition There have been times when
