Emerging Dairy Processing Technologies Nivedita

Datta, Peggy M. Tomasula, 2015-04-27 Fluid milk processing is energy intensive with high financial and energy costs found all along the production line and supply chain Worldwide the dairy industry has set a goal of reducing GHG emissions and other environmental impacts associated with milk processing Although the major GHG emissions associated with milk production occur on the farm most energy usage associated with milk processing occurs at the milk processing plant and afterwards during refrigerated storage a key requirement for the transportation retail and consumption of most milk products Sustainable alternatives and designs for the dairy processing plants of the future are now being actively sought by the global dairy industry as it seeks to improve efficiency reduce costs and comply with its corporate social responsibilities Emerging Dairy Processing Technologies Opportunities for the Dairy Industry presents the state of the art research and technologies that have been proposed as sustainable replacements for high temperature short time HTST and ultra high temperature UHT pasteurization with potentially lower energy usage and greenhouse gas emissions These technologies include pulsed electric fields high hydrostatic pressure high pressure homogenization ohmic and microwave heating microfiltration pulsed light UV light processing and carbon dioxide processing The use of bacteriocins which have the potential to improve the efficiency of the processing technologies is discussed and information on organic and pasture milk which consumers perceive as sustainable alternatives to conventional milk is also provided This book brings together all the available information on alternative milk processing techniques and their impact on the physical and functional properties of milk written by researchers who have developed a body of work in each of the technologies This book is aimed at dairy scientists and technologists who may be working in dairy companies or academia It will also be highly relevant to food processing experts working with dairy ingredients as well as university departments research centres and graduate students *Ultrafiltration Handbook* Munir Cheryan, 1986 **Handbook on Particle Separation Processes** Arjen van Nieuwenhuijzen, Jaap van der

Graaf,2011-09-19 Particles in water play an important role in all kinds of water quality and treatment issues Since the early beginnings of centralised water production and treatment the main goal of water purification was primarily the removal of water turbidity in order to produce clear water free from visible particles The Handbook on Particle Separation Processes provides knowledge and expertise from a selected group of international experts with a wealth of experience in the field of particles and particle separation in water and wastewater treatment The Handbook on Particle Separation Processes includes an edited selection of presentations and workshops held at the academic summer school Particle Separation in Water and Wastewater Treatment organised under the supervision of the IWA Specialist Group Particle Separation

Sustainable Water and Wastewater Processing Charis M. Galanakis,Evita Agrafioti,2019-05-08 Sustainable Water and Wastewater Processing covers the 12 most current topics in the field of sustainable water processing with emphasis given to water as a resource quality supply distribution and aquifer recharge Topics covered include emerging sustainable technologies for potable and wastewater treatment water reuse and recycling advanced membrane processes desalination technologies integrated and hybrid technologies process modeling advanced oxidative and catalytic processes environmentally economically and socially sustainable technology for water treatment industrial water treatment reuse and recovery of materials and emerging nanotechnology and biotechnology for water processing Responding to the goals of sustainability requires the maximum utilization of all water resources water processing with restricted energy costs and reduced greenhouse gas production Following these trends this book covers all the important aspects of sustainable water processing and support Covers cutting edge topics of water process engineering sustainability and energy efficiency Fills the transfer knowledge gap between academia and industry by analyzing the associated environmental economic and sustainability challenges of water processing Includes theoretical and applied research and technological and industrial solutions for sustainable economic and large scale water treatment recycling and reutilization Analyzes potentiality and economic feasibility of already commercialized processes

Separation and Purification Technologies in Biorefineries

Shri Ramaswamy,Hua-Jiang Huang,Bandaru V. Ramarao,2013-02-04 Separation and purification processes play a critical role in biorefineries and their optimal selection design and operation to maximise product yields and improve overall process efficiency Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive Consequently a better understanding of separation and purification processes current and possible alternative and novel advanced methods is essential for achieving the overall techno economic feasibility and commercial success of sustainable biorefineries This book presents a comprehensive overview focused specifically on the present state future challenges and opportunities for separation and purification methods and technologies in biorefineries Topics covered include Equilibrium Separations Distillation liquid liquid extraction and

supercritical fluid extraction Affinity Based Separations Adsorption ion exchange and simulated moving bed technologies Membrane Based Separations Microfiltration ultrafiltration and diafiltration nanofiltration membrane pervaporation and membrane distillation Solid liquid Separations Conventional filtration and solid liquid extraction Hybrid Integrated Reaction Separation Systems Membrane bioreactors extractive fermentation reactive distillation and reactive absorption For each of these processes the fundamental principles and design aspects are presented followed by a detailed discussion and specific examples of applications in biorefineries Each chapter also considers the market needs industrial challenges future opportunities and economic importance of the separation and purification methods The book concludes with a series of detailed case studies including cellulosic bioethanol production extraction of algae oil from microalgae and production of biopolymers Separation and Purification Technologies in Biorefineries is an essential resource for scientists and engineers as well as researchers and academics working in the broader conventional and emerging bio based products industry including biomaterials biochemicals biofuels and bioenergy *Commerce Business Daily*, 1997-12-31 *Microfiltration and Ultrafiltration* Zeman, 2017-11-22 Integrates knowledge on microfiltration and ultrafiltration membrane chemistry and characterization methods with the engineering and economic aspects of device performance device and module design processes and applications The text provides a discussion of membrane fundamentals and an analytical framework for designing and developing new filtration systems for a broad range of technologically important functions It offers information on membrane liquid precursors fractal and stochastic pore space analysis novel and advanced module designs and original process design calculations *Filters and Filtration Handbook* T. Christopher Dickenson, 1997 Following over 3 000 sales of the third edition the fourth edition of *Filters Filtration Handbook* is again destined to become the leading reference manual for filtration and separation products The handbook is an essential reference tool for engineers designers technicians plant operators and consultants as well as staff with responsibility for purchasing planning sales and marketing It is directly relevant to numerous industries including water fluid power chemicals pharmaceutical food and beverages processing general engineering electronics and manufacturing *Ceramic Ultra Filtration and Microfiltration Membrane Separations* T.
