   Recent Trends in Swarm Intelligence Enabled Research for Engineering Applications Siddhartha Bhattacharyya,Mario Köppen,Debashis De,Bijaya Ketan Panigrahi,2024-07-13 With the advent of data intensive applications the elimination of redundancy in disseminated information has become a serious challenge for researchers who are on the lookout for evolving metaheuristic algorithms which can explore and exploit the information feature space to derive the optimal settings for specific applications Swarm intelligence algorithms have developed as one of the most widely used metaheuristic techniques for addressing this challenge in an effective way Inspired by the behavior of a swarm of bees these swarm intelligence techniques emulate the corresponding natural instincts to derive optimal solutions for data intensive applications Recent Trends in Swarm Intelligence Enabled Research for Engineering Applications focuses on the recent and most up to date technologies combining other intelligent tools with swarm intelligence techniques to yield robust and failsafe solutions to real world problems This book aims to provide audiences with a platform to learn and gain insights into the latest developments in hybrid swarm intelligence It will be useful to researchers engineers developers practitioners and graduate students working in the major and interdisciplinary areas of computational intelligence communication systems computer networks and soft computing Introduces the theory underpinning hybrid swarm intelligence enabled research as well as the leading applications across the fields of communication networking and information engineering Presents a range of applications research including signal processing communication engineering bioinformatics controllers federated learning systems blockchain and IoT Includes case studies and code snippets in applications chapters   **Quantum Engineering Sciences and Technologies for Industry and Services** Frédéric Barbaresco,François Gerin,2026-02-20 This two volume set CCIS 2743 and 2744 constitutes the refereed proceedings of the 1st International Conference on Quantum Engineering Sciences and Technologies for Industry and Services QUEST IS 2025 held in Paris France during December 1 4 2025 The 68 full papers included in this book were carefully reviewed and selected from 120 submissions They were organized in topical sections as follows Part I Enabling Technologies Quantum Sensors Applications Quantum Sensors in Detection and Sensing Quantum Communications Test Platforms for Qkd Quantum Key Distribution Towards A Quantum Internet Infrastructure Quantum Algorithms Computing Error Mitigation and Quantum Algorithms for Finance Scheduling Logistics Quantum Machine Learning Physics Simulation Hardware and Specialized Applications Security   **Computational Science – ICCS 2021** Maciej Paszynski,Dieter Kranzlmüller,Valeria V.    Modern Portfolio Optimization with NuOPTTM, S-PLUS®, and S+BayesTM Bernd Scherer,R. Douglas Martin,2007-09-05 In recent years portfolio optimization and construction methodologies have become an increasingly critical ingredient of asset and fund management while at the same time portfolio risk assessment has become an essential ingredient in risk management and this trend will only accelerate in the coming years Unfortunately there is a large gap between the limited treatment of portfolio construction methods that are presented in most university courses with relatively little hands on experience and limited computing tools and the rich and varied aspects of portfolio construction that are used in practice in the finance industry Current practice demands the use of modern methods of portfolio construction that go well beyond the classical Markowitz mean variance optimality theory and require the use of powerful scalable numerical optimization methods This book fills the gap between current university instruction and current industry practice by providing a comprehensive computationally oriented treatment of modern portfolio optimization and construction methods The computational aspect of the book is based on extensive use of S Plus the S NuOPTTM optimization module the S Plus Robust Library and the S BayesTM Library along with about 100 S Plus scripts and some CRSP sample data sets of stock returns A special time limited version of the S Plus software is available to purchasers of this book For money managers and investment professionals in the field optimization is truly a can of worms rather left un opened until now Here lies a thorough explanation of almost all possibilities one can think of for portfolio optimization complete with error estimation techniques

and explanation of when non normality plays a part A highly recommended and practical handbook for the consummate professional and student alike Steven P Greiner Ph D Chief Large Cap Quant Fundamental Research Manager Harris InvestmentManagement The authors take a huge step in the long struggle to establish applied post modern portfolio theory The optimization and statistical techniques generalize the normal linear model to include robustness non normality and semi conjugate Bayesian analysis via MCMC The techniques are very clearly demonstrated by the extensive use and tight integration of S Plus software Their book should be an enormous help to students and practitioners trying to move beyond traditional modern portfolio theory Peter Knez CIO Global Head of Fixed Income Barclays Global Investors With regard to static portfolio optimization the book gives a good survey on the development from the basic Markowitz approach to state of the art models and is in particular valuable for direct use in practice or for lectures combined with practical exercises Short Book Reviews of the International Statistical Institute December 2005
