Women in Nanotechnology Pamela M. Norris, Lisa E. Friedersdorf, 2019-07-16 This book celebrates a few examples of the many women who have advanced the field of nanotechnology. The book opens with an overview of the field, illuminating how nanotechnology is opening the door to manipulating matter on a scale one billionth of a meter. Then the use of nanotechnology to improve science and scientific literacy is discussed, and strategies for incorporating nanotechnology in K-12 education are presented. Next, an array of female scientists provide technical descriptions of how their work is impacting their respective areas. Topics include applications in the energy, electronics, water, communication, and health care sectors, among others. The book closes with a historical perspective on the U.S. National Nanotechnology Initiative and future prospects for nanotechnology. This book provides the opportunity to appreciate some of the key advancements made by women engineers in nanotechnology and to become inspired by the ingenuity and creativity, collaborative nature, and altruistic inventiveness of women engineers. Includes contributions from leading female scientists in nanotechnology. Highlights topics in nanotechnology ranging from health care to sensors to alternative energy to clean water to nanoelectronics. Presents an opportunity to learn about the breadth, depth, and impact of the field of nanotechnology and women's important contributions to it.

[Plant Microbiome: Interactions, Mechanisms of Action, and Applications, volume III](#) Alok Kumar Srivastava, George Newcombe, Gustavo Santoyo, Prem Lal Kashyap, 2025-11-11 Due to the success of the original Research Topic and the following Volume II, we have decided to launch a Volume III of Plant Microbiome Interactions: Mechanisms of Action and Applications. The relationship between plants and their surroundings, especially those plant-microbe interactions,

with a beneficial output remain the center of considerable attention. Plants depend on their microbiomes for multifarious life supporting activities including nutrient acquisition and augmentation of their defense systems against biotic and abiotic stresses. The interactions between a plant and its microbiome are highly complex and dynamic in nature. The plant immune system in particular is thought to have a profound impact in determining the plant microbiome structure and diversity. Characterizing the plant microbiome and its function could be applied for better crop design and management especially in resource limited environments and to protect plants from intruding pathogens. Therefore a deep understanding of the interrelationships of the soil plant microorganism system is essential for improving the efficacy and potential applications of plant growth promoting inocula for achieving sustainable food security and development. Recent studies of plant growth promoting rhizobacteria show that cocktails of useful bacteria in the form of synthetic communities are better than single inoculants which face competition from other microorganisms and could be killed or suppressed under sub optimal conditions. Microbial activity should also be considered in the construction of microbial co inoculants. Understanding plant microbe interactions and mechanisms will also help in the development of smart microbial fertilizer formulation and application in the future. This Research Topic welcomes the following subtopics: Interactomics for sustainable agriculture studies using novel combinatorial approaches employing computational expertise to analyze the data from genomics, transcriptomics, metabolomics and proteomics based studies leading to identification of targets and validating wet lab experiments with molecular evidence for resolving issues in agriculture and sustainability. Please note that purely descriptive sequencing studies will not be considered. Plant microbiome studies deciphering the structure and composition of complex microbial communities associated directly or indirectly with the plant i.e. endophytic, epiphytic and rhizospheric communities and their significance. Topic Editors: Alok Kumar Srivastava and Prem Lal Kashyap have created commercial products related to the Topic. All other topic editors declare no competing interests with regard to the Research Topic subject.

Wheat Rusts and Resistance Breeding Gurcharn Singh Brar, Samuel Holden, 2025-04-08. This detailed volume collects techniques for increasing our understanding of wheat rust pathogens, the host plant and the interactions between the two. Beginning with routine and advanced tools used for pathogen surveillance, characterization and field assessment of germplasm for resistance, the book continues with sections on genetic analysis and breeding for rust resistance as well as rust management through fungicidal approaches. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Wheat Rusts and Resistance Breeding Methods and Protocols* serves as an ideal guide for established researchers looking to familiarize themselves with new innovations and for new researchers working to

strengthen their understanding of rust pathogens

Surviving and Thriving: How Crops Perceive and Respond to Temperature Stress Zemin Wang, Yi Wang, Darren Wong, 2025-01-27 The dramatic temperature fluctuations spurred by climate change inhibit plant growth and threaten crop productivity Unraveling how plants defend themselves against temperature stress induced cellular impairment is not only a crucial fundamental issue but is also of critical importance for agricultural sustainability and food security Improving crop tolerance to abiotic stress conditions requires a deep understanding of the response of plants to changes in their environment This response is dependent on early and late signal transduction events that involve important signaling molecules such as reactive oxygen species ROS sugars different plant hormones and other signaling molecules It is the integration of these signaling events mediated by an interplay between ROS sugars and different plant hormones that orchestrates the plant response to abiotic stress and drive changes in transcriptomic metabolic and proteomic networks that lead to plant acclimation and survival This Research Topic explores the crops balancing growth and temperature stress responses and how these findings can be used to increase crop quality and yield potential
