The Encyclopedia of Best Films Jay Robert Nash, 2019-10-23 This all inclusive A Z encyclopedia by one of the world's foremost experts on cinema provides comprehensive annotations of the best films produced from 1914 on. The work offers more than 5 000 three to five star entries: three stars good, four stars excellent, five stars masterpiece, and yes, author Jay Robert Nash has viewed every single one of them, as well as many more that did not make the cut. In addition to a precis, each film's entry also includes a listing of the cast, as well as the key principles involved in production, from the director to the hair stylist. Especially unique to this book is a rating system that helps parents determine whether or not a film is appropriate for their children. Unlike the industry rating system, which can be influenced by studio lobbying, Nash objectively evaluates each film and confers upon it one of four recommendations: for viewing, recommended, acceptable, cautionary, and unacceptable. Backmatter includes a list of top films by genre, i.e. animated, drama, sports, mystery, adventure, etc., as well as an annotated name index listing all persons mentioned, along with their dates of birth and death. Rounding out this essential volume for the film buff are over 500 still photos from the author's private collection.

Natural Language Interfaces for Databases with Deep Learning George Katsogiannis-Meimarakis, Anna Mitsopoulou, Mike Xydas, Georgia Koutrika, 2025-11-12 This book covers the main research areas that aim to bridge the world of databases and SQL with the world of natural language. It provides a comprehensive coverage of the most influential work in the field that takes advantage of deep learning. Enabling users to access databases using natural language has been a longstanding goal since the inception of relational databases, that despite continued efforts remains an open challenge. However, the advancement of neural networks has given new life to this area, inspiring a new wave of works in multiple directions. Starting with an introduction on the history of NLIDs and a brief neural primer on deep learning architectures frequently mentioned throughout the book, the initial chapters focus on the Text to SQL problem. There, an overview of the problem is given, followed by a general architecture of Text to SQL systems and a deeper analysis of specific systems. Additionally, the reverse process of explaining an SQL query, i.e. SQL to Text, is examined along with open research problems and the currently available solutions. The book continues with the multi-turn Text to SQL problem that enables users to make corrections or ask follow-up questions, outlining the underlying system architectures and introducing key representative systems. To put everything into perspective, the subsequent chapter takes a broader look at the more general areas of code understanding and generation that encapsulate the problems discussed in the previous chapters. Moving on, the focus shifts on generating NL explanations and summaries of data, i.e. the Data to Text problem, offering an overview of the problem and its challenges, as well as an overall system architecture and specific Data to Text systems. Then, bringing Data to Text closer to NLIDs, the book dives deeper into the Results to Text problem that focuses on how to express the result of a query in user-friendly natural language. Finally, the book concludes by offering insights into how all the discussed research areas and systems can be brought together to create an NLIDB, along with risk

and challenges that must be considered in the process This book is intended for both researchers and practitioners interested in NLIDBs regardless of their prior familiarity with the topic Readers with experience in this area will benefit from a structured overview and categorization of existing systems along with an in depth analysis of benchmarks persistent challenges and open research questions Conversely newcomers can explore the landscape of neural NLIDBs through an accessible presentation of the relevant subfields and key advancements without requiring any prior background knowledge
