Artificial Intelligence in Educational and Business Ecosystems: Convergent Perspectives on Agency, Ethics, and Transformation Charity M. Dacey,Jasmin Cowin ,Joy de los Reyes,2026-03-13 Artificial Intelligence AI has received a great

deal of attention as educational systems have been increasingly affected by rapid technological changes. We invite proposals examining the dynamic interplay between human educators, learners, and artificial intelligence systems in contemporary educational spaces. Recent advances in AI have fundamentally altered the educational landscape, creating novel forms of cognitive extension and pedagogical possibility. This transformation demands rigorous transdisciplinary investigation into how AI systems, human actors, and learning environments coalesce into dynamic educational assemblages. We seek contributions that explore these emerging phenomena through multiple theoretical lenses and methodological approaches. As AI systems become increasingly sophisticated, anthropomorphic participants in educational processes, we must reconceptualize traditional frameworks of teaching and learning. This calls for examination of how cognition is distributed across human-AI networks, how agency emerges from these interactions, and how educational spaces are transformed by these new configurations. Critical questions arise about the nature of knowledge construction, the role of embodied experience, and the ethical implications of AI-mediated learning. AI will have an exponential impact on pedagogy, and there are wider implications as well, which may call for thoughtful policy revisions. We are seeking transdisciplinary perspectives to facilitate a fertile dialogue about the transformative impact of AI in education and business, given these fields are uniquely intertwined. Many questions that can be addressed include: How will AI simulations in various disciplines be designed and experienced? How can teachers/faculty be encouraged to embrace gamification without compromising student engagement? What will AI's role be in fundamental learning, communication, and cognitive development of students? Will there be effects on embodied cognition and experiential learning? What are they? How should educational governance units respond to AI integration in education and business environments, and address data privacy issues? What are the ethical challenges of AI in business education, and how can AI be effectively incorporated in creating work force-ready business graduates with a foundation in business ethics? How do businesses mitigate the potential for deceptive marketing in a world of AI while maintaining profitability? What are the concerns about potential centralization of power of educational technology companies? In what ways can educational leaders ensure that AI prevents educational inequities and biases rather than fostering them? What is AI's exponential impact on pedagogy? What are the opportunities and possible affordance frameworks of AI's potential in personalizing learning and enhancing interactive dynamics? What are the risks of diminishing human roles in education? For this article collection, we seek manuscripts with a focus on AI that address some of these questions. We are particularly interested in addressing AI across all three levels of multi-tiered systems of support (MTSS) in terms of academics, social, emotional, and behavioral development. For this Research Topic, we welcome a breadth of research from a wide range of contexts, perspectives, and methodological approaches to bring in more possibilities for research on teacher innovative, collaborative, and ethical classroom AI practices.

Men age like wine, women age like milk. On the differing evaluation of aging (and body size) depending on gender Michelle Paul, 2026-02-18 Essay from the year 2025 in the subject Gender Studies grade 1 0 University of Rome La Sapienza ITALIANO DI STUDI ORIENTALI course Culture Gender Media language English abstract The essay Men age like wine women age like milk On the differing evaluation of aging and body size depending on gender examines how gendered double standards shape the social evaluation of aging and body size in contemporary media culture Using a popular internet meme comparing Tom Cruise and Kelly McGillis in 1986 and 2022 as a case study the analysis explores how men's aging is culturally framed as dignified and attractive while women's aging and weight gain are treated as signs of failure and decline The theoretical framework draws on Susan Sontag's concept of the double standard of aging Sylvia Walby's theory of patriarchy Rozanova's discourse of successful aging and Taylor and Hoskin's work on the intersection of fatness and femininity These perspectives situate the meme within broader patriarchal structures that systematically privilege men while subjecting women to intensified bodily surveillance and aesthetic expectations The analysis demonstrates that aging is not treated as a neutral biological process but as a socially evaluated marker of worth In Western media culture successful aging is associated with youthfulness productivity and self control However these expectations are gendered masculinity is linked to competence and authority qualities that are not undermined by age whereas femininity is culturally tied to youthfulness and thinness As a result women's aging is interpreted as a loss of value The meme reinforces this logic by presenting Cruise's aging as natural and respectable while McGillis's visible aging and weight gain are implicitly framed as personal shortcomings Body size intensifies this inequality The essay argues that femininity is culturally constructed as small controlled and visually pleasing meaning that larger female bodies are read as excessive and undisciplined In this way aging and fatness intersect as mechanisms of gendered control The meme though seemingly humorous functions as a vehicle for circulating and normalizing patriarchal standards By presenting its message through minimal text and visual contrast it frames gendered bias as common sense Ultimately the essay concludes that such memes are not harmless jokes but cultural artifacts that reproduce structural inequalities They contribute to a broader system in which women's worth is tied to youth and thinness while
