

## Frictions

When tying, you must regularly isolate sections so rope tension in one section doesn't cause movement in another. Shibari traditionally doesn't use knots but instead relies on simple wraps.

These wraps don't have an official name, but the term I've heard that I feel is the most apt is "frictions".

Frictions rely on the rope's toothiness to grip adjacent rope, so synthetic rope may require one or more actual knots to stabilize the section. Frictions with Half-Hitches are good for synthetic ropes but tend to be difficult to untie.

Since the Japanese masters use different frictions (and some change their styles over

time), I've included various sample frictions.

When studying this section, remember that the frictions, shown:

- are representative but not exhaustive
- may need fewer or more wraps to be secure, depending on the rope
- must be adapted to suit the more complex ropework contained in this book

Finally, expect your initial ropework to not be very neat.

Spend a lot of time practicing frictions (e.g. tie your own thighs) until you can quickly and confidently route the rope in any direction you require.

Expect to still be refining your technique years from now.
