practical advancements This synthesis of combinatorics set theory and graph theory provides a strong foundation for addressing the complexities and uncertainties present in mathematical and real world systems paving the way for future research and application

Abstract Musical Intervals Ming Tsao,2007 This book is an introduction to GIS Generalized Interval Systems theory that includes the major results of pitch class theory It provides mathematicians with applications of group theory to music and music theorists with the essential connections between GIS theory and pitch class theory Many of the results in pitch class theory are not addressed by David Lewin such as power functions or the Common Tone Theorem for inversions The book states those results and generalizes them to conform with GIS theory Finally it addresses recent criticisms leveled at pitch class theory and suggests how they can be addressed in GIS theory
