Transformation of Teaching-Learning Strategies in the Digital Era R. Sengamalam, TEACHING AND LEARNING WITH EMERGING TECHNOLOGY: A Future Perspective Dr. P. Muthukumar, Dr. A.R.S. Kannan, Dr. K. Malini, This edited book focuses on the possible education responses that can be implemented in future education times. The impact of technology on learning and teaching is often at the forefront of demands, particularly from those who dictate the funding available to pay for technology within education systems. This is not an unreasonable request and there is merit in impact evaluations of educational technologies including emerging technologies. Besides, it also shows how emerging technologies including Artificial Intelligence, Blockchain, Educational Games, and Virtual Reality, Augmented Reality will reshape the future of education to provide efficient learning, teaching experiences, and assessments. Furthermore, the book discusses innovative teaching and learning approaches, e.g. the use of open educational practices and peer-to-peer learning that can be applied in this rapidly moving technological era to maintain education including in unconditional times. Particularly, new instructional methods such as game-based learning should be designed based on integrated technologies to provide an effective learning experience resulting in better learning outcomes. Future education should not solely focus on technology and psychology but also on the applied instructional methods as well as the human touch to maintain authentic and effective learning experiences. The book also discusses how teaching and learning can be designed to meet the growing tendency of Open and Distance Education where thousands of learners can be taken the same course from different cultures, backgrounds, and learning needs. This book aims to establish itself through the published books, textbooks, and research as a medium to provide guidelines and recommendations for different stakeholders including policymakers, educational designers, teachers, and students on how to enhance both learning and teaching experiences in the future for better learning outcomes as well as how to maintain education in emergency times. It also provides one step ahead

towards future education to prepare different stakeholders for the rapid evolution of education even in times of emergency and difficult situations *A practical compendium of top life skills and universal human values from a social sciences perspective* Sujay Rao Mandavilli,2025-05-24 A skill as it is understood in everyday parlance refers to either the actively and consciously learned or the innate and intrinsic ability to act towards the achievement of a goal or a set of goals with steadfastness determined precision and vigour and through the use of fixed and a calculated amount of time energy and financial resources Skills are often subdivided into general and activity specific or focused skills Common examples of general skills include general and time management hard work and commitment teambuilding and teamwork and thought leadership besides self and third party motivation In contrast activity or domain specific skills refer to those skills that are applicable only for a specific kind of activity for e g carrying out a military operation or achieving expertise on a particular subject A skill may be called an art when it represents a body of knowledge or branch of learning such as in the case of the art of precision surgery or the art of warfare All types of human quotidian activities require some type of skills though the degree and extent of skills may vary on a case to case basis Jobs also require some kinds of skills to varying degrees and jobs may be classified and categorized into unskilled jobs semi skilled jobs and skilled jobs Examples of unskilled jobs include that of a restaurant waiter This kind of job however requires a basic degree of skills such as customer management and customer service examples of semi skilled jobs include that of a chef while examples of a job requiring a high degree of skills may be that of an aeronautical engineer The latter requires years of training and practice and many formal certifications to boot
