Mesenchymal Stem Cells and Derived Extracellular Vesicles as Next-Generation Biological Drugs for Tissue Regeneration Silvia Barbon, Andrea Porzionato, Antara Banerjee, 2026-01-30 In the field of Regenerative Medicine the preclinical and clinical research on multipotent adult stem cells and in particular mesenchymal stem cells MSCs has prompted the identification of new therapeutic approaches for the treatment of structural tissue organ dysfunctions and congenital or acquired diseases Over the last decades compelling evidence has demonstrated that the powerful therapeutic effects of MSCs are due to paracrine like secretion of cytokines growth factors and chemokines and extracellular vesicles EVs EVs are the paracrine effectors of MSCs that carry a set of molecules capable of influencing the metabolism and even the phenotype of target cells tissues The application of MSCs as biological drugs in cell therapy is based on regulating the inflammatory response and participating in tissue repair and regeneration The therapeutic effect of MSCs is largely ascribed to their immunomodulatory function regulated by the inflammatory environment Among the most important regenerative properties and immune regulation capabilities of MSCs is the secretion of EVs that retain the therapeutic action of the parent cells The use of EVs may help to overcome the safety concerns associated with live cell therapy and become the focus of future clinical approaches in Regenerative Medicine Several researchers have explored the role of MSCs and MSC EVs in various tissue damaging diseases However their key role in the development of immune regulation and stimulation of tissue regeneration still deserves to be clarified prior to their clinical application This Research Topic invites different kinds of contributions e.g. original research articles short communications review articles clinical studies that focus on the preclinical and translational investigation of MSCs and MSC EVs about different therapeutic aspects related to organ tissue regeneration Topics include but are not restricted to the following MSC responsiveness to humoral and mechanical stimuli to promote functional tissue regeneration Interactions between MSCs and natural synthetic biomaterials for the development of advanced tissue substitutes Standardization of MSC EV isolation and enrichment techniques and characterization of their biological structure transcriptome and secretome In vitro and in vivo investigation of the paracrine activity of MSCs and MSC EVs including their immunomodulatory function MSC and MSC EV based therapies in animal models of organ failure and disease

Rural STEM Education Research: Bridging between Uniqueness and Universality Guan Saw, Angela Starrett, Audrey Meador, Hobart Harmon, 2026-01-23 The opposition between uniqueness and universality in rural science technology engineering mathematics and medicine

STEMM education research is an enduring feature of the field. Theories and methods developed to be universally applicable are constantly adopted or reimaged in studying and understanding certain unique STEMM education phenomena or issues within and across rural contexts partly due to the vastness and variety that exists in what is labeled as rural and or STEMM education. Research ideas and findings focused on a unique rural population or setting often can have universal implications for other rural and non rural populations or settings though not explicitly articulated in many publications. Striving to be both unique and universal is a fundamental challenge yet has the potential to advance knowledge and practice in the field of rural STEMM education. The overall goal of this Research Topic is to introduce and explore the ideas of rural focused and rural reimaged approaches in potentially bridging the gaps between uniqueness and universality in STEMM education research. Rural focused theories and constructs e.g. place based education, rural identity are centered around populations and issues in rural settings whereas rural reimaged theories and constructs e.g. urban rural spatial inequality, social capital, expectancy, value beliefs are traditional theories and constructs that are reconceptualized to include rural perspectives in the studies. This Research Topic seeks articles that examine both the uniqueness and universality of rural STEMM education and educational research utilizing rural focused and or rural reimaged lens or approaches. We particularly welcome articles that address unique assets, challenges, needs, opportunities and or lessons learned of rural STEMM education while being situated in a broader research discipline as well as articles that explore the commonalities and connections across study cases, policies, programs, practices or contexts of rural STEMM education. This Research Topic invites theoretical, methodological and empirical contributions addressing but not limiting to the following key topics: Rural focused topics: Defining rurality in STEMM education, Defining STEMM in rural areas, Place based STEMM teaching learning etc. Rural STEMM identity, belonging etc. STEMM education in rural serving postsecondary institutions, STEMM education for local workforce development. Rural reimaged topics: Urban rural spatial inequality in rural STEMM education, Community cultural wealth in rural STEMM education, STEMM funds of knowledge of rural learners, Underrepresentation of rural students in STEMM education, Intersectionality in rural STEMM education, Critical policy analysis in rural STEMM education, Communities of practice in rural STEMM education, Research practice partnerships for rural STEMM education. Articles need to define rurality for interpretation by international readers and describe the uniqueness and universality of the research topics, theories, methods, findings and or implications in the context of rural STEMM education.

Early Childhood Deaf Education: Teacher Preparation and Instructional Approaches Graham, Patrick, Neild, Nena Raschelle, 2025-09-25. Early childhood is a critical period for language acquisition, cognitive development and social emotional growth making high quality education essential for those who are deaf or hard of hearing. Effective early childhood deaf education requires specialized teacher preparation and carefully designed instructional approaches that address the linguistic and communication needs of young deaf learners. Educators must be trained in general early childhood pedagogy and deaf education strategies including sign

language proficiency auditory verbal techniques and culturally responsive teaching With ongoing debates around language modalities inclusion practices and access to early intervention services the preparation of qualified teachers and the adoption of evidence based instructional methods play a central role in shaping positive educational outcomes for deaf children Early Childhood Deaf Education Teacher Preparation and Instructional Approaches explores teacher preparation for the diverse needs of deaf and hard of hearing children in early childhood settings It examines the effectiveness of various instructional approaches in supporting language development academic readiness and social integration This book covers topics such as literacy young students and special education and is a useful resource for educators academicians researchers and scientists

Natural Compounds in Veterinary Therapeutics Baocheng Hao, Dongan Cui, Shuaiyu Wang, 2026-02-04 Natural compounds exhibit a diverse array of structures originate from extensive sources and are characterized by their multi target multi pathway and broad pharmacological activities These include alkaloids flavonoids phenolic acids tannins terpenes and polysaccharides among other varied natural compounds Historically natural compounds have been a significant source for the discovery of new drugs With the shift of animal husbandry from traditional practices to large scale and intensive farming challenges in the prevention and treatment of animal diseases have intensified due to increased antibiotic resistance emerging diseases and mixed infections Against this backdrop the screening and discovery of natural compounds with therapeutic potential as well as elucidating their mechanisms of action have emerged as crucial strategies to address these challenges By persistently focusing on the pharmacological activities and therapeutic efficacy of natural compounds in veterinary treatments as well as the discovery of novel drug targets this approach provides a theoretical foundation and reference for the creation and development of innovative veterinary medicines This journal primarily features original research on the application of natural compounds in veterinary therapy with a specific focus on the roles of terpenoids flavonoids phenolic acids tannins polysaccharides and alkaloids These natural compounds are investigated for their potential in countering oxidative stress reducing inflammation modulating immune responses combating microorganisms and promoting intestinal health The publication accepts original contributions in the form of reviews and articles Perspective
