

ACLS Megacode Case 1: Sinus Bradycardia (Bradycardia → VF/Pulseless VT → Asystole → ROSC)

Out-of-Hospital Scenario

You are a paramedic and arrive on the scene to find a 57-year-old woman complaining of indigestion. She is cold, clammy, and diaphoretic. She tells you she is about to faint. EMS responders have obtained vital signs: HR 38/min, BP 70 mm Hg/systolic, RR 16/min, and O₂ saturation 93%. No other assessment or management has been performed. Now you assume the role of team leader.

Case Development

Initial Assessment	This patient may have an ACS. The case focus, however, is bradycardia. The team leader should begin to take a history and direct team members to start oxygen if not intubated and gain IV access (not able to get an IV in) and place monitor leads. Recognition at this point would be inappropriate in the absence of typical ischemic-type discomfort and given the patient's vital signs (bradycardia and hypotension = contraindicated).
Bradycardia Algorithm	The student is presented with bradycardia and needs to follow the Bradycardia Algorithm. A critical action is noting that symptoms are due to bradycardia that requires management. Actions at this point should include at least an initial dose of atropine and preparation for TCC or use of intravenous drug (epinephrine or dopamine infusions).
Cardiac Arrest Algorithm (VF/Pulseless VT)	The patient suddenly develops VF. The team leader will follow the Cardiac Arrest Algorithm. Now the student team leader will assign additional team functions and monitor for high-quality CPR. The case should continue through safe termination, administration of a vasopressor, and consideration of an antiarrhythmic drug.
Cardiac Arrest Algorithm (Asystole)	After a shock, the patient becomes asystole. The student continues to monitor high-quality CPR and follows the asystole pathway of the Cardiac Arrest Algorithm.
Immediate Post-Cardiac Arrest Care Algorithm	The team continues high-quality chest compressions, the patient has ROSC, and the Immediate Post-Cardiac Arrest Care Algorithm is initiated.

ACLS Megacode Case 2: Mobitz Type II AV Block (Bradycardia → VF/Pulseless VT → Asystole → ROSC)

In-Hospital Scenario

You are evaluating a 57-year-old woman complaining of indigestion. She is brought immediately from triage (arrived by personal car) and placed in ED room 2. She is cold, clammy, and diaphoretic. She states that she feels as if she is about to faint. The triage nurse is working with you and has obtained vital signs: HR 38/min, BP 70 mm Hg/systolic, RR 16/min, and O₂ saturation 93%.
