Adaptive Klippel Nonlinear Control Of Loudspeaker Systems:

Signal Processing for Active Control Stephen Elliott,2000-09-26 Signal Processing for Active Control sets out the signal processing and automatic control techniques that are used in the analysis and implementation of active systems for the control of sound and vibration After reviewing the performance limitations introduced by physical aspects of active control Stephen Elliott presents the calculation of the optimal performance and the implementation of adaptive real time controllers for a wide variety of active control systems Active sound and vibration control are technologically important problems with many applications Active control means controlling disturbance by superimposing a second disturbance on the original source of disturbance Put simply initial noise other specially generated noise or vibration silence or controlled noise This book presents a unified approach to techniques that are used in the analysis and implementation of different control systems It includes practical examples at the end of each chapter to illustrate the use of various approaches This book is intended for researchers engineers and students in the field of acoustics active control signal processing and electrical engineering

Nonlinear and Adaptive Control with Applications Alessandro Astolfi,Dimitrios Karagiannis,Romeo Ortega,2007-12-06 The authors here provide a detailed treatment of the design of robust adaptive controllers for nonlinear systems with uncertainties They employ a new tool based on the ideas of system immersion and manifold invariance New algorithms are delivered for the construction of robust asymptotically stabilizing and adaptive control laws for nonlinear systems The methods proposed lead to modular schemes that are easier to tune than their counterparts obtained from Lyapunov redesign Nonlinear and Adaptive Control Alan S.I. Zinober,David H. Owens,2003-07-01 The objective of the EU Nonlinear Control Network Workshop was to bring together scientists who are already active in nonlinear control and young researchers working in this field This book presents selectively invited contributions from the workshop some describing state of the art subjects that already have a status of maturity while others propose promising future directions in nonlinear control Amongst others following topics of nonlinear and adaptive control are included adaptive and robust control applications in physical systems distributed parameter systems disturbance attenuation dynamic feedback optimal control sliding mode control and tracking and motion planning
