present trend is to adopt a global heterogeneous network of shared standards that enables the provisioning of quality of service and quality of experience to the end user To this end enabling technologies like machine learning Internet of Things and digital twins are seen as promising solutions for next generation networks that will enable an intelligent adaptive interconnected environment with support for prediction and decision making so that the heterogeneous applications and users requirements can be highly satisfied The aim of this textbook is to provide the readers with a comprehensive technical foundation of the mobile communication systems and wireless network design and operations and applications of various radio access technologies Additionally it also introduces the reader to the latest advancements in technologies in terms of Internet of Things ecosystems machine learning and digital twins for IoT enabled intelligent environments Furthermore this textbook also includes practical use case scenarios using Altair WinProp Software as well as Python TensorFlow and Jupyter as support for practice based laboratory sessions

Wireless Communication-the fundamental and advanced concepts Sanjay Kumar,2022-09-01 Wireless communication is one of the fastest growing fields in the engineering world today Rapid growth in the domain of wireless communication systems services and application has drastically changed the way we live work and communicate Wireless communication offers a broad and dynamic technological field which has stimulated incredible excitements and technological advancements over last few decades The expectations from wireless communication technology are increasing every day This is placing enormous challenges to wireless system designers Moreover this has created an ever increasing demand for conceptually strong and well versed communication engineers who understand the wireless technology and its future possibilities In recent years significant progress in wireless communication system design has taken place which will continue in future Especially for last two decades the research contributions in wireless communication system design have resulted in several new concepts and inventions at remarkable speed A text book is indeed required to offer familiarity with such developments and underlying concepts to be taught in the classroom to future engineers This is one of the motivations for writing this book Practically no book can be up to date in this field due to the fast ongoing research and developments The new developments are announced almost every day Teaching directly from the research papers in the classroom cannot build the necessary foundation Therefore need for a textbook is unavoidable which is integral to learning and is an essential source to build the concept The prime goal of this book is to cooperate in the learning process
