Computational Intelligence for Decision Support Zhengxin Chen, 1999-11-24 Intelligent decision support relies on techniques from a variety of disciplines including artificial intelligence and database management systems Most of the existing literature neglects the relationship between these disciplines By integrating AI and DBMS Computational Intelligence for Decision Support produces what other texts don't an explanation of how to use AI and DBMS together to achieve high level decision making Threading relevant disciplines from both science and industry the author approaches computational intelligence as the science developed for decision support The use of computational intelligence for reasoning and DBMS for retrieval brings about a more active role for computational intelligence in decision support and merges computational intelligence and DBMS The introductory chapter on technical aspects makes the material accessible with or without a decision support background The examples illustrate the large number of applications and an annotated bibliography allows you to easily delve into subjects of greater interest The integrated perspective creates a book that is all at once technical comprehensible and usable Now more than ever it is important for science and business workers to creatively combine their knowledge to generate effective fruitful decision support Computational Intelligence for Decision Support makes this task manageable

Data Base Management System Mr. S. Sureshkumar, Dr. S. Suresh, Mr. S. Joseph James, Mrs.

Priya R,2022-09-26 A database is a collection of data that are connected Databases allow for the efficient retrieval insertion and deletion of data from the database Additionally databases arrange the data in the form of tables views schemas reports and other such things For instance a university database would categorize the data on students teachers and administrative staff among other categories which will aid in the effective retrieval insertion and deletion of data from the database The database management system DBMS is in charge of managing the data the database engine enables users to access lock and modify data and the database schema outlines the logical structure of the database These three fundamental components assist ensure concurrency security the integrity of data and standardized methods for the administration of data The database management system provides support for a wide variety of duties that are often associated with database administration These tasks include change management performance monitoring and tuning security backup and recovery and more The majority of database management systems are also responsible for automatic rollbacks and restarts as well as the recording and auditing of activity in databases and the applications that use them Other responsibilities of these systems include logging and auditing database activity A centralized view of the data is provided by the DBMS This view may be accessed in a controlled way by numerous users from various places at the same time A database management system DBMS may restrict the data that end users see and how they see the data offering many perspectives on a single database structure Because the DBMS processes all requests end users and software programs do not need to be aware of where the data is physically located or on what kind of storage media it is stored because the DBMS does all of the work for them This book contains chapters and topics that cover all of the necessary information that is associated with Data management system After doing a great deal of study on the subject the author decided to add the content that is now included in this book After engaging in a great deal of conversation the writers of this book contributed all of the material that is included in this book This book contains a lot of material that will assist readers in gaining a better understanding of all the chapters
