

## Building Construction Notes

### Building Construction

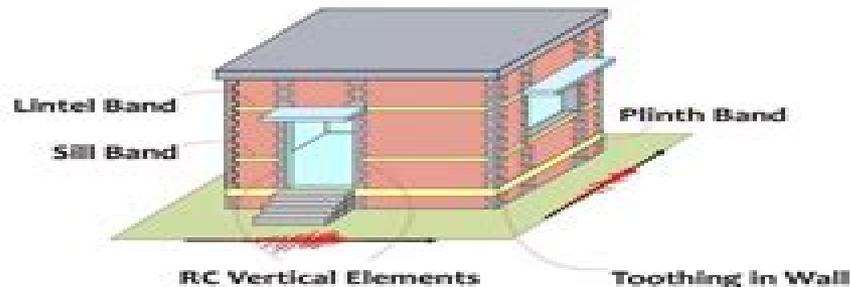

### Construction

*Construction is the process of constructing a building or infrastructure. Construction differs from manufacturing in that manufacturing typically involves mass production of similar items without a designated purchaser, while construction typically takes place on location for a known client.*

### Building construction

*Building construction is the process of adding structure to real property. The vast majority of building construction projects are small renovations, such as addition of a room, or renovation of a bathroom. Often, the owner of the property acts as laborer, paymaster, and design team for the entire project.*

### Key Components of Confined Masonry Building

The key features of structural components of a confined masonry building are discussed below:

### Masonry walls

Masonry walls transmit the gravity load from the slab(s) above, down to the foundation (along with the RC tie-columns). The confined masonry walls are made up of solid clay bricks and act as bracing panels, which resist horizontal earthquake forces acting in-plane. The walls must be confined by RC tie-beams and tie-columns and should not be penetrated by significant openings to ensure satisfactory earthquake performance.
