

Building a corporate taxonomy: benefits and challenges

Taxonomies are a fundamental part of any modern information architecture. Any organisation that needs to make significant volumes of information available in an efficient and consistent way to its customers, partners or employees needs to understand the value of a serious approach to taxonomy design and management.

However, many organisations are unfamiliar with taxonomy development and management. At its simplest, a taxonomy is a hierarchical organisation of categories used for classification purposes. Such a simple definition hides the many challenges to be faced in building and maintaining an effective and usable taxonomy for your organisation.

This report explains why taxonomies are a key issue for many organisations, and looks at the benefits they bring and the challenges to be faced in developing and maintaining a corporate taxonomy. It also examines the role of categorisation tools in taxonomy design and maintenance, and looks at future technology trends.
