Power System Operation and Optimization

Considering High Penetration of Renewable Energy Shengyuan Liu, Zhenzhi Lin, Yuqing Dong, Jin Zhao, 2024-09-19 The energy landscape is shifting toward renewable energy sources to mitigate climate change and reduce dependence on fossil fuels. The integration of renewable energy sources into the power grid presents various challenges, including uncertainty and variability of renewable energy sources, grid stability, and management of energy storage. Power system operation and optimization play a crucial role in managing the energy supply demand balance, reducing operational costs, and improving the reliability of the power system. This call for papers aims to bring together the latest research and practical applications related to power system operation and optimization in the context of high penetration of renewable energy sources. We welcome contributions from researchers and practitioners from a broad range of disciplines to shed light on the challenges and opportunities associated with renewable energy integration in power systems. The objective of this Research Topic is to explore the latest advances in power system operation and optimization with a focus on the high penetration of renewable energy sources. We invite potential authors to submit articles for publication on the Research Topic of *Frontiers in Energy Research on Power System Operation and Optimization Considering the High Penetration of Renewable Energy*.

Advances in Renewable Energy and Sustainable Development Zhoufu Liang, Rafiziana Md. Kasmani, 2022-12-07

Advances in Renewable Energy and Sustainable Development focuses on cutting edge research areas including renewable energy and sustainable development. As a leader in the global megatrend of science and technology innovation, China has been creating an increasingly open environment for science and technology innovation, increasing the depth and breadth of academic cooperation and building an innovation community that benefits all people. These efforts make a new contribution to globalization and the building of a community for a shared future. The proceedings feature the most cutting edge research directions and achievements related to Renewable Energy and Sustainable Development. Subjects in the proceedings include Hydraulic Engineering, Environmental Science and Environmental Engineering, Energy Engineering and Energy Technologies, Green Manufacturing, Energy Policy and Economics, Energy Security and Clean Use, Geothermal Energy, Sustainable Energy Investment. Joseph Nyangon, John Byrne, 2021-03-10 This book examines the technical market and policy innovations for unlocking sustainable investment in the energy sector. While finalizing this book, the COVID-19 pandemic is cutting a devastating swath through the global economy, causing the biggest fall in energy sector investment, exacerbating the global trade finance gap, worsening signs of growing income inequality, and devastating the health and livelihoods of millions. What is the parallel between the COVID-19 pandemic and the climate change crisis? The impacts of the global pandemic are expected to last for a few years, whereas those associated with the climate crisis will play out over several decades with potentially irreversible consequences. However, both show that the cost of inaction or delay in addressing the risks can lead to devastating outcomes or a greater probability of irreversible catastrophic damages. In the context of sustainable energy

investment and the transition to a low carbon climate resilient economy what ways can financial markets and institutions support net zero emission activities and the shift to a sustainable economy including investment in energy efficiency low carbon and renewable energy technologies This book provides students policymakers and energy investment professionals with the knowledge and theoretical tools necessary to address related questions in sustainable energy investment risk management and energy innovation agendas

An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach Fabian Hoeft, 2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today s world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model approach from a start up perspective has been developed based on the analysis of the environment industry and customer needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of

competitiveness and sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight The business model approach developed based on the findings obtained differs fundamentally from the strategies of today s providers By incorporating the existing infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be achieved Partnering with universities and industry are two critical elements in the development of a sustainable secure and user friendly technical solution
