Contending Theories of International Relations [by] James E. Dougherty [and] Robert L. Pfaltzgraff, Jr James E. Dougherty, 1987 *International Relations and Scientific Progress* Patrick James, 2002 International Relations and Scientific Progress contends that a theory focusing on the structure of the international system explains a wider and more interesting range of events in world politics than other theories Such theorizing appears to be out of favor as the result of the apparent failure by structural realism the most prominent system level theory over the last two decades on any number of fronts most notably an inability to anticipate the ending of the Cold War and its aftermath This new book is put forward as the most comprehensive and innovative theoretical work on paradigms in international relations since the publication of Theory of International Politics which created structural realism more than two decades ago With appropriate revisions however structural realist theory can compete effectively and reclaim its primacy The first part of International Relations and Scientific Progress assesses the meaning of progress in the discipline of international relations a process that culminates in the creation of a new concept the scientific research enterprise The second part reviews structural realism within that context and identifies a lack of connection between theory and research that links power based indicators to international conflict crisis and war This part of the book makes the case for an elaboration of structural realism by showing that a system

level theory based on structure has great unrealized explanatory potential. By comparison, the current overwhelmingly research-oriented agenda on state dyads imposes severe limitations on understanding that are not currently appreciated. Part Three sums up the work and explores new directions, most notably as related to empirical testing of an elaborated version of structural realism that focuses on both continuity and change in the international system.

Systems, Relations, and the Structures of International Societies Jack Donnelly, 2023-11-02 Argues that systems approaches are necessary in order to identify and understand important features of the world.

Cyber Blockades Alison Lawlor Russell, 2014-11-05 Cyber Blockades is the first book to examine the phenomena of blockade operations in cyberspace: large-scale attacks on infrastructure or systems that aim to prevent an entire state from sending or receiving electronic data. Cyber blockades can take place through digital, physical, and/or electromagnetic means. Blockade operations have historically been considered acts of war; thus, their emergence in cyberspace has significant implications for international law and for our understanding of cyber warfare. The author defines and explains the emerging concept of cyber blockades and presents a unique comparison of blockade operations in five different domains: on land, at sea, in the air, in space, and in cyberspace, identifying common elements as well as important distinctions. Alison Lawlor Russell's framework for defining cyber blockades, understanding how they occur, and considering the motivations of actors who employ them is applied with in-depth analysis of the cyber attacks on Estonia in 2007 and on Georgia during the 2008 Georgia-Russia War. Blockade operations have occurred in cyberspace and will doubtlessly be used again in the future by both state and non-state actors alike because of the unique advantages of this type of attack. This book offers recommendations for policymakers contemplating or confronted by such attacks. Cyber Blockades is also a must-read for scholars and students of security studies, terrorism, substate groups, and the future of warfare.

International Relations and the First Great Debate Brian Schmidt, 2013-08-15 This book provides an authoritative account of the controversy about the first great debate in the field of International Relations. Of all the self-images of International Relations, none is as pervasive and enduring as the notion that a great debate pitting idealists against realists took place in the 1940s. The story of the first great debate continues to structure the contemporary identity of International Relations; yet, in recent years, revisionist historians have challenged the conventional wisdom that the field experienced such a debate. Drawing on expert contributors working in Canada, Europe, the United Kingdom, and the United States, this book includes key participants in the historiographical controversy. The book assembles the existing scholarship and provides a thorough analysis of the status of the first great debate in the history of International Relations. It is an invaluable examination of the causes and future direction of idealist and realist arguments. *International Relations and the First Great Debate* will be of interest to students and scholars concerned with the foundations of International Relations.

Constructing a Chinese School of International Relations Yongjin Zhang, Teng-Chi Chang, 2016-06-10 This edited volume offers arguably the first systemic and critical assessment of the debates about and contestations to the construction of a

putative Chinese School of IR as sociological realities in the context of China's rapid rise to a global power status. Contributors to this volume scrutinize a particular approach to worlding beyond the West as a conscious effort to produce alternative knowledge in an increasingly globalized discipline of IR. Collectively they grapple with the pitfalls and implications of such intellectual creativity drawing upon local traditions and concerns, knowledge claims, and indigenous sources for the global production of knowledge of IR. They also consider critically how such assertions of Chinese voices and articulation of their ambition for theoretical innovation from the disciplinary margins contribute to the emergence of a Global IR as a truly inclusive discipline that recognizes its multiple and diverse foundations. Reflecting the varied perspectives of both the active participants in the Chinese School of IR debates within China and the observers and critics outside China, this work will be of great interest to students and scholars of IR theory, Non-Western IR, and Chinese Studies.

The Theory and Practice of International Relations James R. Lee, 1994 **Dialectics and Humanism**, 1986 **Georgetown Journal of International Law**, 2006 *The Domestic Roots of Japan's International Environmental Policies* Anny Wong, 1998 *Asia Major*, 2006 *The Evolution of Military Strategy of the Republic of Korea Since 1950* Byoung Tae Rhee, 2004 *Foreign Relations Journal*, 1988 *Security Studies for the 1990s* Richard H. Shultz, Roy Godson, Ted Greenwood, 1993

The United States is grappling with a new security framework to replace the structure of the Cold War era. American policymakers face a host of challenges including regional conflicts, ethnic tensions, and weapons proliferation that commanded little attention in the past. And tomorrow is likely to bring new concerns barely on today's horizon. Despite these changes, the study of national security remains largely a creature of the Cold War. The security studies discipline needs to be overhauled. But how should it be revised so that tomorrow's citizens and experts are equipped to understand and help manage new challenges? One option is to downgrade security studies and divert educational resources elsewhere. Another is to redefine the subject to include the study of an all-encompassing list of international problems. The third choice is to retain basic definitions, concepts, and subjects while also making significant adjustments. *Security Studies for the 1990s* addresses all three options. This book is the first to reexamine security studies in the post-Cold War era. Scholars and directors from leading security studies programs representing a cross-section of viewpoints on foreign affairs discuss what new material needs to be taught and which courses and concepts should be recast. Each chapter provides an in-depth review of a major security studies course, proposing needed changes and a model syllabus. Subjects include intelligence policy, global environmental problems, the causes and termination of wars, and collective security. A chapter on the teaching of ethics, a subject often neglected in the past, is also featured.
