An Over-height Collision Protection System of Sandwich Polymer Composites Integrated with Remote Monitoring for Concrete Bridge Girders, 2008 One of the common damages in existing highway bridges is the damage at the bottom corners or edges of the reinforced concrete beams or box girders induced by an impact of trucks exceeding the allowable height clearance of the bridges In this study a collision protection and scarifying system is developed and it utilizes advanced materials structures to

protect highway bridge girders The proposed collision protection and scarfing system is in a new I Lam Impact Laminate configuration and bolted and or bonded to the bottom portions or edges of concrete girders The I Lam panels are made of a composite sandwich construction with multi layer aluminum honeycomb core and top and bottom thin face sheets and they are developed designed specifically for impact damage protection of bridge girders e g concrete girders Design criteria and guideline for I Lam are developed and the analysis optimal design and quality control tests of the collision protection system are conducted Smart piezoelectric sensors are integrated with the I Lam panels for monitoring the performance of the collision protection system The collision protection system is implemented in an identified bridge The developed smart bilayer honeycomb I Lam sandwich is capable of reducing the transferred contact force dramatically absorbing mitigating impact energy protecting the underneath concrete structures by system scarfing and core crushing and monitoring the impact incident with smart piezoelectric sensors and it is applicable to protecting other structures e g steel girders columns from accidental vehicle impact in the highways
