Introductory Differential Equations Martha L. Abell, James P. Braselton, 2009-09-09 This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics Fourier Series and Boundary Value Problems The text is appropriate for two semester courses the first typically emphasizes ordinary differential equations and their applications while the second emphasizes special techniques like Laplace transforms and partial differential equations The text follows a traditional curriculum and takes the traditional rather than dynamical systems approach Introductory Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems Note that some schools might prefer to move the Laplace transform material to the second course which is why we have placed the chapter on Laplace transforms in its location in the text Ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple would be recommended and or required ancillaries depending on the school course or instructor Technology Icons These icons highlight text that is intended to alert students that technology may be used intelligently to solve a problem encouraging logical thinking and application Think About It Icons and Examples Examples that end in a question encourage students to think critically about what to do next whether it is to use technology or focus on a graph to determine an outcome Differential Equations at Work These are projects requiring students to think critically by having students answer questions based on different conditions thus engaging students
