Merger & Acquisition-Activities and their Influence on Stock Prices** Florian Beyer, 2020-04-08 Seminar paper from the year 2017 in the subject Business economics, Investment and Finance, grade 1.7. The FOM University of Applied Sciences Hamburg, language English, abstract. This paper will examine the question of how M&A activities influence a company's stock price and earnings per share (EPS), especially if the bootstrap effect occurs. In 2016, the global mergers and acquisitions (M&A) activities decreased by about 18 percent compared to 2015. Altogether 17,369 deals with a value of 3.2 trillion USD were performed. There are numerous reasons to invest and divest in inorganic growth. Organic growth has its limitations; thus, acquiring competitors, growing vertically or horizontally, as well as accessing new markets, are strong motivators to do so. Growing a business is often linked with going public. The decision to be part of the stock market and to perform M&A influences an enterprise's

value for various reasons To approach these questions the first chapter gives a general overview of reasons motivators risks and benefits of M A Thereafter the influence of M A on a company s shareholder value and EPS is examined Then the bootstrap effect is explained and subsequently illustrated by an exemplary M A transaction Afterwards the risks and benefits of bootstrapping and M A are analysed to consider its usefulness and influence on the share price and EPS *Journal of Applied Corporate Finance* ,2004
