Financial Simulation Modeling in Excel Keith A. Allman, Josh Laurito, Michael Loh, 2011-09-02 I've worked with simulation in business for over 20 years and Allman really nails it with this book I admit that I own his previous book on structured finance cash flows but I was surprised by what I found in here He addresses the fundamental questions of how decision makers react to simulations and his read was very much in accordance with what I've experienced myself When it came to the nuts and bolts of describing the different types of simulation analysis the book becomes incredibly detailed There is working code and models for a fantastic array of the most common simulation problems If you're so inclined the book very carefully steps through the tricky math needed to really understand the theory behind stochastic modeling in finance If you're preparing models that include any kind of randomization or stochastic modeling component this book is a must read a tremendous value and time saver David Brode of The Brode Group A practical guide to understanding and implementing financial simulation modeling As simulation techniques become more popular among the financial community and a variety of sub industries a thorough understanding of theory and implementation is critical for practitioners involved in portfolio management risk management pricing and capital budgeting *Financial Simulation Modeling in Excel* contains the information you need to make the most informed decisions possible in your professional endeavors *Financial Simulation Modeling in Excel* contains a practical hands on approach to learning complex financial simulation methodologies using Excel and VBA as a medium Crafted in an easy to understand format this book is suitable for anyone with a basic understanding of finance and Excel Filled with in depth insights and expert advice each chapter takes you through the theory behind a simulation topic and the implementation of that same topic in Excel VBA in a step by step manner Organized in an easy to follow fashion this guide effectively walks you through the process of creating and implementing risk models in Excel A companion website contains all the Excel models risk experts and quantitative

analysts need to practice and confirm their results as they progress Keith Allman is the author of other successful modeling books including Corporate Valuation Modeling and Modeling Structured Finance Cash Flows with Microsoft Excel Created for those with some background in finance and experience in Excel this reliable resource shows you how to effectively perform sound financial simulation modeling even if you've yet to do extensive modeling up to this point in your professional or academic career

Introduction to Credit Risk Modeling Christian Bluhm, Ludger Overbeck, Christoph Wagner, 2016-04-19 Contains Nearly 100 Pages of New Material The recent financial crisis has shown that credit risk in particular and finance in general remain important fields for the application of mathematical concepts to real life situations While continuing to focus on common mathematical approaches to model credit portfolios Introduction to Credit Risk Modelin

Bio-Inspired Credit Risk Analysis Lean Yu, Shouyang Wang, Kin Keung Lai, Ligang Zhou, 2008-04-24 Credit risk analysis is one of the most important

topics in the field of financial risk management Due to recent financial crises and regulatory concern of Basel II credit risk analysis has been the major focus of financial and banking industry Especially for some credit granting institutions such as commercial banks and credit companies the ability to discriminate good customers from bad ones is crucial The need for reliable quantitative models that predict defaults accurately is imperative so that the interested parties can take either preventive or corrective action Hence credit risk analysis becomes very important for sustainability and profit of enterprises In such backgrounds this book tries to integrate recent emerging support vector machines and other computational intelligence techniques that replicate the principles of bio inspired information processing to create some innovative methodologies for credit risk analysis and to provide decision support information for interested parties *Credit risk management in Chinese banks* Yang Wang, Dr Supervisor Elhag, University of Manchester. School of Mechanical, Aerospace & Civil Engineering, 2006 **Credit Risk Modeling** Tomasz R. Bielecki, Monique Jeanblanc, Marek Rutkowski, 2009-11 Joint Credit Risk Modeling Exercise, 2000 *Essays on Credit Risk Modeling*, 2004 *Three Essays on Credit Risk Modeling* Xiaopeng Zhang, 2001 *Credit Risk Modeling and Analysis Using Copula Method and Changepoint Approach to Survival Data* Bo Qian, 2013 On the other hand the lag effect and saturation effect problems are common and important problems in survival data analysis They belong to a general class of problems where the treatment effect takes occasional jumps instead of staying constant throughout time Therefore they are essentially the changepoint problems in statistics The second part of this thesis focuses on extending Lai and Xing's recent work in changepoint modeling which was developed under a time series and Bayesian setup to the lag effect problems in survival data A general changepoint approach for Cox model is developed Simulations and real data analyses are conducted to illustrate the effectiveness of the procedure and how it should be implemented and interpreted **Business Cycle and Credit Risk Modeling with Jump Risks** Bong-Gyu Jang, 2016 We develop a structural model that incorporates both macroeconomic risks and firm specific jump risks Using this model we derive analytic formulas for default probability equity price and CDS spreads We show that including the two types of risk in credit risk modeling can generate better explanations for firm's credit risks in the real world Based on reasonably calibrated parameters we find that our model could better predict actual default probabilities and overcome the underestimation of credit risks especially for firms with high credit ratings which has been one of the major limitations of the currently available structural models The structural model proposed in this paper highlights that macroeconomic factors are important in modeling credit risks and that default probabilities and CDS spreads could be dependent on the current economic state **Credit Risk Model with Lagged Information on the Firm** Jaewon Choi, 2004 On Credit Risk Modeling and Credit Derivatives Pricing □□□, 2014 **Credit Risk Modelling with Default-triggered Acquisition** Wing Cheung, 2006
