

Genetics & Probability Worksheet 3

There are a variety of question types on this worksheet. Read each question carefully. Remember to:

- Use proper symbols for all traits dependent on inheritance patterns.
- Separate traits into their own Punnett Squares for probability models.
- Use the multiplication and addition rules to solve for probability models.

1. Mendel collected data on one of his crosses for height of pea plants. After counting all of the offspring, Mendel found 1841 plants were tall; 608 plants were dwarf. Use these results to determine the phenotypic ratio of the offspring produced in this cross. Use this ratio and a Punnett square to determine the genotypes of the two parental pea plants. Finally, provide the genotypic ratio of any possible offspring.

Phenotypic Ratio _____

Genotypes of Parents _____

Genotypic Ratio _____

2. A dog breeder is trying to have a litter of yellow lab puppies. She has a female black lab, and is unsure whether it will be possible. Other breeders in her area only have male black labs. Although two genes go into determining coat color, only the gene at location E is necessary to determine whether pups are black or yellow. Presence of the dominant allele (E) results in a black coat. The recessive allele (e) results in the yellow phenotype. Determine the necessary genotypes of both the breeder's dog, as if the donor's dog to ensure at least some of the puppies are yellow labs.

Genotype – Breeder _____

Genotype – Donor _____

Phenotypic % _____

Phenotypic Ratio _____
