This report deals with the design of foundations carrying more than a single column or wall load. These foundations are called combined footings and mats. Although it is primarily concerned with the structural aspects of the design, considerations of soil mechanics cannot be eliminated and the designer should focus on the important interrelation of the two fields in connection with the design of such structural elements. This report is limited to vertical effects of all loading conditions. The report excludes slabs-on-grade.

Manual for Detailing Reinforced Concrete Structures to EC2 José Calavera, 2011-11-09

Detailing is an essential part of the design process This thorough reference guide for the design of reinforced concrete structures is largely based on Eurocode 2 EC2 plus other European design standards such as Eurocode 8 EC8 where appropriate With its large format double page spread layout this book systematically details 213 structural elements These have been carefully selected by Jos Calavera to cover relevant elements used in practice Each element is presented with a whole page annotated model along with commentary and recommendations for the element concerned as well as a summary

of the appropriate Eurocode legislation with reference to further standards and literature The book's website provides AutoCAD files of all of the models which can be directly developed and adapted for specific designs Its accessible and practical format makes the book an ideal handbook for professional engineers working with reinforced concrete as well as for students who are training to become designers of concrete structures
