Advanced Building Technologies For Sustainability:

Advanced Building Technologies for Sustainability Asif Syed, 2012-07-03 Practical solutions for sustainability In this timely guide one of the world's leaders in advanced building technology implementation shows architects and engineers proven and practical methods for implementing these technologies in sustainably designed buildings Because of the very limited time architects are given from being awarded a project to concept design this book offers clear and workable solutions for implementing solar energy radiant heating and cooling floors displacement ventilation net zero and more It provides helpful tips and suggestions for architects and engineers to work together on implementing these technologies along with many innovative possibilities for developing a truly integrated design This book also explores and explains the many benefits of advanced technologies including reduced greenhouse gas emissions lower operating costs noise reduction improved indoor air quality and more In addition *Advanced Building Technologies for Sustainability* Offers detailed coverage of solar energy systems thermal energy storage geothermal systems high performance envelopes chilled beams under floor air distribution displacement induction units and much more Provides case studies of projects using advanced technologies and demonstrates their implementation in a variety of contexts and building types Covers the implementation of advanced technologies in office towers large residential buildings hospitals schools dormitories theaters colleges and more Complete with a clear and insightful explanation of the requirements for and benefits of acquiring the U S Green Building Council's LEED certification *Advanced Building Technologies for Sustainability* is an important resource for architects engineers developers and contractors involved in sustainable projects using advanced technologies

Green and Smart Buildings

Nilesh Y. Jadhav, 2016-10-01 This book highlights the various technologies that are currently available or are now being developed for the green and smart buildings of the future It examines why green building performance is important and how it can be measured and rated using appropriate benchmarking systems Lastly the book provides an overview of the state of the art in green building technologies and the trend towards zero energy or net positive energy buildings in the future

New Technologies in Building and Construction David Bienvenido-Huertas, Juan Moyano-Campos, 2022-05-15 This book presents contributions on new technologies in building and construction Buildings are complex elements that impact environment significantly The sustainability of this sector requires a holistic and multidisciplinary approach that allows adequate strategies to be established to reduce its environmental impact This heterogeneity is represented in these chapters which have been developed by researchers from different countries The book is divided into three sections i analysis ii design and modeling and iii solutions The book chapters together represent an advance in current knowledge about new technologies in building and construction crucial for researchers engineers architects policy makers and stakeholders

Advanced Building Technologies for Energy Savings and Decarbonization Piljae Im, Yeobeom Yoon, Sungkyun Jung, 2024-11-11 The building sector is a major consumer of energy making it essential to explore innovative strategies for

reducing its environmental impact As we shift our focus toward decarbonization and electrification the need for advanced building operation techniques and equipment becomes increasingly urgent These advancements are crucial for maintaining or enhancing indoor environmental quality while simultaneously minimizing energy consumption This Special Issue aims to showcase cutting edge technologies in building energy management alongside effective measurement and verification methods It will also address fault detection and diagnosis approaches leveraging both simulation and experimental studies The ultimate goal is to highlight solutions that not only reduce CO emissions but also improve indoor environmental quality creating healthier and more sustainable living and working spaces By presenting a diverse array of research contributions this Special Issue will provide valuable insights into the latest advancements in building energy technologies It will drive the discussion around effective strategies for energy efficiency and environmental sustainability in the building sector These efforts can help transform buildings from energy consumers into more efficient spaces that contribute to reducing our overall carbon footprint
