Ai Tools Update Returns:

Prediction Machines, Updated and Expanded Ajay Agrawal, Joshua Gans, Avi Goldfarb, 2022-11-15 Named one of The five best books to understand AI by The Economist The impact AI will have is profound but the economic framework for understanding it is surprisingly simple Artificial intelligence seems to do the impossible magically bringing machines to life driving cars trading stocks and teaching children But facing the sea change that AI brings can be paralyzing How should companies set strategies governments design policies and people plan their lives for a world so different from what we know In the face of such uncertainty many either cower in fear or predict an impossibly sunny future But in Prediction Machines three eminent economists recast the rise of AI as a drop in the cost of prediction With this masterful stroke they lift the curtain on the AI is magic hype and provide economic clarity about the AI revolution as well as a basis for action by executives policy makers investors and entrepreneurs In this new updated edition the authors illustrate how when AI is framed as cheap prediction its extraordinary potential becomes clear Prediction is at the heart of making decisions amid uncertainty Our businesses and personal lives are riddled with such decisions Prediction tools increase productivity operating machines handling documents communicating with customers Uncertainty constrains strategy Better prediction creates opportunities for new business strategies to compete The authors reset the context describing the striking impact the book has had and how its argument and its implications are playing out in the real world And in new material they explain how prediction fits into decision making processes and how foundational technologies such as quantum computing will impact business choices Penetrating insightful and practical Prediction Machines will help you navigate the changes on the horizon

Fashion Works Isabel Cantista, 2026-01-19 This book brings together a set of contributions through which it is possible to understand the recent evolution and the moment of disruption in which the textile and fashion industry finds itself Considered for a long time as a traditional industry with a reduced technological component its competitiveness is now imposed by technological dominance both in terms of new materials or processes based on biotechnology and in terms of data processing and digitalization of processes from production to omnichannel distribution the use of metaverse and Artificial Intelligence In this book the cases of the Zara and Shein brands new materials and digitalization of processes along the entire value chain are analyzed Everything is in transformation including Fashion Education All these changes will lead to questions about the circularity and sustainability of the industry
