

## Activities

- Task**: A Task is a unit of work, the job to be performed, that includes all the resources, a task duration, a task priority, an activity flow direction.
- Subprocess**: A Subprocess is a unit of activities that operates along together. It might feature a special execution context.
- Event Sub-Process**: An Event Sub-Process is a process that features an Event-Trigger. It is activated when the event occurs and gets triggered and can be triggered and triggered and driven (started or not completed) when following depending on the start event.
- Call Activity**: A Call Activity is a reference to a generic activity type or Process Model in the current Process, or call to a Process Model and an Event-Trigger.

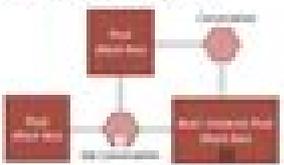

- Activity Markers**  
Markers indicate execution behavior of activities:
- Task-Precedence
  - Exclusive
  - Parallel
  - Inclusive
  - Parallel-Inclusive
  - None
  - Event-Precedence
- Task Types**  
Task types are used at the end of the swimlane:
- Start Task
  - End Task
  - Intermediate Task
  - Start Task
  - Intermediate Task
  - End Task
  - Start Task
  - Intermediate Task
  - End Task

  - End Task

- Message Flow**: Defines the message flow in a process.
- Message Flow**: Is the message flow in a process.
- Message Flow**: Is a message flow in a process.

## Conversations

- A Conversation defines a set of logically connected messages and changes that represent with a system of interaction a participant's a participant's interaction.
- A Conversation is a structure for a globally unique conversation in the Conversation Pool. It is a participant's interaction.
- A Conversation can contain Conversation Participants.

## Gateways

- Exclusive Gateway**: When starting, it routes the outgoing flow to exactly one of the outgoing flows, depending on a given condition (exclusive) or compares values (exclusive) of the outgoing flow.
- Parallel Gateway**: A flow is started by starting events at several entry points. A flow is started in the subsequent event that does require this.
- Parallel Gateway**: When starting, all the outgoing flows are started simultaneously. When ending, parallel flows are joined by all incoming flows in a complex event (joining the outgoing flow).
- Inclusive Gateway**: When starting, one or more outgoing flows are started, or when ending, parallel flows are joined (joining the outgoing flow).
- Exclusive Gateway**: An Exclusive Event-based Gateway that incorporates an outgoing flow that starts in a new process instance.
- Parallel Gateway**: An Inclusive Event-based Gateway that incorporates all outgoing flows from a new process instance.

## Swimlanes

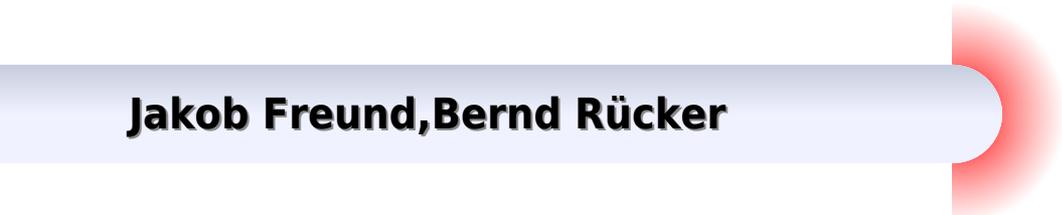

## Data

- Data Object**: Represents information flowing through the process, such as business documents, or money, or energy.
- Collection Data Object**: Represents a collection of information, e.g., a list of order items.
- Data Input**: An external input to the process, such as a kind of input parameter.
- Data Output**: An external output from the process, such as a kind of output parameter.
- Data Store**: A pool in which data is available for retrieval, production, and update.
- Data Store**: A pool in which data is available for retrieval, production, and update.

**Successful Architecture Implementation** Roland Woldt, 2025-03-24 Nobody wakes up one morning in their early years and says I want to become an enterprise architect But there is a need for this skill set in organizations The better ones you know the ones who seemingly can change on the fly have implemented a practice either focusing on the whole enterprise or on process management or IT architecture in a lower maturity state But what are some reasons for the sad state of affairs when it comes to architecture Organizations have outdated or no documentation Nobody understands what was implemented in the necessary detail The impact of proposed or actual changes downstream is not clear and doing the analysis is a painful exercise so often it will be replaced with a wild guess You will be able to collaborate with all affected parties There might be a tension between business and IT as the two largest players here that can be resolved by creating a shared view of the changes Upstream planning How does my change fit into the bigger picture or our project landscape is also a wild guess and the pet project of a stakeholder gets priority The potential improvements of your suggestions are not seen or cannot be quantified Creating a business case becomes a nightmare of wild guesses Regulators might require the establishment of the capability and you have to stand it up if you like it or not But you don't know how to do this If you go down the route of implementing an architecture program and capability you can reap multiple benefits Some of them are Enable planning and bigger picture when it comes to structures architectures and projects Establish common language and approach in your organization The structured discipline will help to find operational and compliance improvement potentials You can literally see what is going on in your organization and only what you can see can be improved What is this book about The main promise of the book is that you will be able to implement a BPM EA program in your organization and cover all aspects that are needed to be successful and bring the people with you on this exciting journey It covers all aspects from strategy through governance design and tool selection configuration to import and creation of content in an easy to follow approach In addition to this it also shows how a real world application of this approach could look like Who is this book for This book is for the brave people who understand that organizations are complex systems and that changes in one place will have an impact on many people ask anyone who has ever implemented an ERP system Typically every stone will be upturned in a transformation program It is for those people who realized that they have to implement an architecture capability in their organizations They have to be able to describe analyze plan support the implementation of changes and measure their impact to be able to manage the enterprise in a responsible and sustainable way It is also for the people who have tried that before and failed Maybe because they only focused on the implementation of a tool the make it and they come approach or they forgot that people typically do not want to change It is also for the curious people who are not 100% convinced that this architecture thing is not too big of a bite for your organization They would like to learn what it takes before they make the decision if they are ready for it But wait this is not all This book also comes with a code for the accompanying website which

includes additional tools all graphics as a downloadable PDF a worksheet that will help you to select your architecture tool and a tracker in Notion when it comes to importing your existing content into your tool

**2.0 Process Diagrams** Felix Kossak,Christa Illibauer,Verena Geist,Jan Kubovy,Christine Natschläger,Thomas Ziebermayr,Theodorich Kopetzky,Bernhard Freudenthaler,Klaus-Dieter Schewe,2015-02-04 This book provides the most complete formal specification of the semantics of the Business Process Model and Notation 2.0 standard BPMN available to date in a style that is easily understandable for a wide range of readers not only for experts in formal methods but e.g. also for developers of modeling tools software architects or graduate students specializing in business process management BPMN issued by the Object Management Group is a widely used standard for business process modeling However major drawbacks of BPMN include its limited support for organizational modeling its only implicit expression of modalities and its lack of integrated user interaction and data modeling Further in many cases the syntactical and in particular semantic definitions of BPMN are inaccurate incomplete or inconsistent The book addresses concrete issues concerning the execution semantics of business processes and provides a formal definition of BPMN process diagrams which can serve as a sound basis for further extensions i.e. in the form of horizontal refinements of the core language To this end the Abstract State Machine (ASMs) method is used to formalize the semantics of BPMN ASMs have demonstrated their value in various domains e.g. specifying the semantics of programming or modeling languages verifying the specification of the Java Virtual Machine or formalizing the ITIL change management process This kind of improvement promotes more consistency in the interpretation of comprehensive models as well as real exchangeability of models between different tools In the outlook at the end of the book the authors conclude with proposing extensions that address actor modeling including an intuitive way to denote permissions and obligations integration of user centric views a refined communication concept and data integration **BPMN 2.0**

**BPMN Method and Style** Bruce Silver, 2009 Creating business process models that can be shared effectively across the business and between business and IT demands more than a digest of BPMN shapes and symbols It requires a step by step methodology for going from a blank page to a complete process diagram It also requires consistent application of a modeling

style so that the modeler's meaning is clear from the diagram itself. Author Bruce Silver explains not only the meaning and proper usage of the entire BPMN 2.0 palette but calls out the working subset that you really need to know. He also reveals the hidden assumptions of core concepts left unexplained in the spec, the key to BPMN's deeper meaning. The book addresses BPMN at three levels with primary focus on the first two. Level 1 or descriptive BPMN uses a basic working set of shapes and symbols to meet the needs of business users doing process mapping. Level 2 or analytical BPMN is aimed at business analysts and architects. It takes advantage of BPMN's expressiveness for detailing event and exception handling, key to analyzing and improving process performance and quality. Level 3 or executable BPMN is brand new in BPMN 2.0. Here the XML underneath the diagram shapes becomes an executable design that can be deployed to a process engine to automate the process. The method and style detailed in the book aligns these three levels, facilitating business-IT collaboration throughout the process lifecycle. Inside the book, you'll find discussions illustrated with over 100 examples about the questions BPMN asks and does not ask. The meaning of basic concepts like starting and completing, sending and receiving, waiting and listening, subprocesses, and hierarchical modeling style. The five basic steps in creating Level 1 models: Event and exception handling patterns, branching and merging patterns. Level 2 modeling method: Elements of BPMN style, element usage, and diagram composition.

*Bpmn 2.0 Handbook Second Edition* Michael zur Muehlen, Stephen White, Thomad Allweyer, Nathaniel Palmer, Denis Gagne, Bruce Silver, Conrad Bock, 2014-11-03. Authored by members of WfMC, OMG, and other key participants in the development of BPMN 2.0, the BPMN 2.0 Handbook Second Edition assembles industry thought leaders and international experts. Following the ground-breaking body of work in the BPMN 2.0 Handbook First Edition, this book is greatly expanded with substantial new content and chapters updated to the latest advances in this important standard. The authors examine a variety of aspects that start with an introduction of what's new and updated in BPMN 2.0 and look closely at interchange, best practices, analytics, conformance, optimization, choreography, and more from a technical perspective. The authors also address the business imperative for widespread adoption of the standard by examining best practice guidelines, BPMN business strategy, and the human interface, including real-life case studies. Other critical chapters tackle the practical aspects of making a BPMN model executable and the basic timeline analysis of a BPMN model. This book is for business people who want to understand the how and why of BPMN 2.0 in simple, non-jargon terms and the strategy and motivation for its adoption within the corporation. It is also for the technical practitioner seeking current insights into the BPMN 2.0 standard and how to take advantage of its powerful capabilities.
