

B.Sc. Semester VI (Honours) Examination, 2021 (CBCS)

Subject: Physics

Paper: CC-XIII

Time: 2 Hours

Full Marks: 40

The figures in the margin indicate full marks. Candidates are required to give their answers in their own words as far as practicable.

Answer any eight of the following questions (all questions carry equal marks) 5×8=40

1. a) Discuss the non-uniqueness of electromagnetic potentials (\vec{A} and ϕ).
b) Write down equations corresponding to the following statements
 - i) Magnetic monopole does not exist.
 - ii) Electric monopole exists.
 - iii) Total electric charge is conserved.
2. a) Show that the electromagnetic potentials in uniform electric and magnetic field may be expressed as $\phi = -\vec{E} \cdot \vec{r}$ and $\vec{A} = \frac{1}{2}(\vec{B} \times \vec{r})$ (with usual meanings of the symbols)
b) If x and y components of electric field vector of an electromagnetic wave be $E_x = a_1 \sin \alpha x$ and $E_y = a_2 \sin(\alpha x + \delta)$, with usual meanings of the symbols.

Show that for $\delta = (m + \frac{1}{2})\pi$ where $m=1,2,3, \dots$, you get elliptic polarization.

3. a) Show that, for an electromagnetic wave propagating in a conducting medium, the electric and magnetic fields are not in phase and that the energy is not shared equally between the electric and magnetic field.
b) An electric field in free space is of the form $\vec{E}(\vec{r}, t) = E_0 \hat{i} \sin^2(z - ct)$. Can it be an electromagnetic wave?
4. Deduce an expression for the refractive index of a dilute ionized gaseous medium. Hence show that (i) electromagnetic wave of frequency less than plasma frequency cannot propagate through the medium and (ii) plasma frequency $f_p = 8.98n_e^{\frac{1}{2}}$, c/s, where n_e is electron number density. [$e = 1.6 \times 10^{-19} C$, $m = 9 \times 10^{-31} kg$, $\epsilon_0 = 8.85 \times 10^{-12} Sf$]

Sir Stanley Reed

Burdwan University 10 Years Question Paper:

Advanced Soft Computing Techniques in Data Science, IoT and Cloud Computing Sujata Dash, Subhendu Kumar Pani, Ajith Abraham, Yulan Liang, 2021-11-05 This book plays a significant role in improvising human life to a great extent. The new applications of soft computing can be regarded as an emerging field in computer science, automatic control engineering, medicine, biology, application, natural environmental engineering, and pattern recognition. Now the exemplar model for soft computing is human brain. The use of various techniques of soft computing is nowadays successfully implemented in many domestic, commercial, and industrial applications due to the low cost and very high performance digital processors and also the decline price of the memory chips. This is the main reason behind the wider expansion of soft computing techniques and its application areas. These computing methods also play a significant role in the design and optimization in diverse engineering disciplines. With the influence and the development of the Internet of things (IoT) concept, the need for using soft computing techniques has become more significant than ever. In general, soft computing methods are closely similar to biological processes than traditional techniques which are mostly based on formal logical systems such as sentential logic and predicate logic or rely heavily on computer-aided numerical analysis. Soft computing techniques are anticipated to complement each other. The aim of these techniques is to accept imprecision, uncertainties, and approximations to get a rapid solution. However, recent advancements in representation, soft computing algorithms, fuzzy logic, evolutionary computation, machine learning, and probabilistic reasoning generate a more intelligent and robust system, providing a human-interpretable, low-cost approximate solution. Soft computing-based algorithms have demonstrated great performance to a variety of areas, including multimedia retrieval, fault tolerance system modelling, network architecture, Web semantics, big data analytics, time series, biomedical, and health informatics, etc. Soft computing approaches such as genetic programming, GP, support vector machine, firefly algorithm, SVM, FFA, artificial neural network (ANN), and support vector machine wavelet (SVM Wavelet) have emerged as powerful computational models. These have also shown significant success in dealing with massive data analysis for a large number of applications. All the researchers and practitioners will be highly benefited, those who are working in the field of computer engineering, medicine, biology, application, signal processing, and mechanical engineering. This book is a good collection of state-of-the-art approaches for soft computing-based applications to various engineering fields. It is very beneficial for the new researchers and practitioners working in the field to quickly know the best performing methods. They would be able to compare different approaches and can carry forward their research in the most important area of research which has direct impact on betterment of the human life and health. This book is very useful because there is no book in the market which provides a good collection of state-of-the-art methods of soft computing-based models for multimedia retrieval, fault tolerance system modelling, network architecture, Web semantics, big data analytics, time series, and biomedical and health informatics.
