**Urban Public Transport Today** Dr Barry John Simpson,B. Simpson,2003-09-02 It is widely recognised that there are many people for whom public transport is essential particularly amongst the elderly children and teenagers Less obvious is the dependence of our cities for their existence on high capacity public transport Although there is still a prevalent view that local public transport is only for those who do not have a car we are slowly beginning to realise that we need to find ways of restricting use of the private car more severely and that will involve some transfer to public transport There is a widening gap between what we expect of public transport and what can be delivered Our expectations for travel are increasing both in quantity and in the standards of speed reliability and comfort Out of town shopping leisure parks and business parks all involve more travel than did their predecessors Cars are becoming more like mobile sitting rooms with all the home comforts such as CD player and telephone To give all this up for a bus or train is asking a lot Urban Public Transport Today gives an honest appraisal of the pros and cons of new public transport technologies It shows how public transport can be made a less unacceptable alternative to the private car than it is now Public transport needs to be co ordinated and planned together with land uses under the Town and Country Planning legislation too often public transport solutions overlook the significance of town planning policies generating demand for travel The author draws on a thorough study of many continental European countries and includes the latest Euro legislation and recent case histories to give a comprehensive coverage of everything from policy problems including land use decisions to practical considerations including road building Urban Public Transport Today will be invaluable for all those involved in the land use local transport conundrum including planning officers policy makers and transport consultants as well as students in transport studies town planning and geography Barry Simpson acts as an advisor to a number of public authorities and private firms in the field of public transport including the Department of Transport He has served for 15 years as an examiner to the Royal Town Planning Institute and teaches transport studies at Aston University

**Stochastic Population Dynamics in Ecology and Conservation** Russell Lande, Steinar Engen, Bernt-Erik Sæther, 2003 All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities Demographic and environmental stochasticity are introduced with statistical methods for estimating them from field data The long run growth rate of a population is explained and extended to include age structure with both demographic and environmental stochasticity Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline Methods are developed for estimating delayed density dependence from population time series using life history data Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components Analysis of the stochastic dynamics of a tropical butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral
