engineers and construction specialists involved in the design construction and contracting of foundation elements for transportation structures CFA piles have been used in the U S commercial market but have not been used frequently for support of transportation structures in the United States This underutilization of a viable technology is a result of perceived difficulties in quality control and the difficulties associated with incorporating a rapidly developing and often proprietary technology into the traditional prescriptive design bid build concept Recent advances in automated monitoring and recording devices will alleviate concerns of quality control as well as provide an essential tool for a performance based contracting process This document provides descriptions of the basic mechanisms involving CFA piles CFA pile types applications for transportation projects common materials construction equipment and procedures used in this technology Recommendations are made for methods to estimate the static axial capacity of single piles A thorough evaluation and comparison of various existing methods used in the United States and Europe is also presented Group effects for axial capacity and settlement are discussed as well as lateral load capacities for both single piles and pile groups A generalized step by step method for the selection and design of CFA piles is presented Quality control QC quality assurance QA procedures are discussed and a performance specification is provided This generic specification may be adapted to specific project requirements A list of the references used in the development of this manual is presented These references include the key publications on the design of augered pile foundations Existing Federal Highway Administration FHWA and American Association of State Highway Officials AASHTO publications that include engineering principles related to the subject of CFA piles are also included in the references

Specification and Design Criteria for the Construction of Continuous Flight Auger Piles in the Houston Area K. M. Hassan, Michael W. O'Neill, Cumaraswamy Vipulanandan, 1997 Five continuous flight auger piles were installed in a stiff clay soil following standard practice Four of these piles were later subjected to lateral load tests to large displacements The length and diameter of the test piles were varied to investigate the effect of these parameters on pile performance The fifth pile was used as a reaction for the four test piles During installation incremental grout take and upper and lower bound grout pressures were monitored continuously and grout samples were acquired and tested
